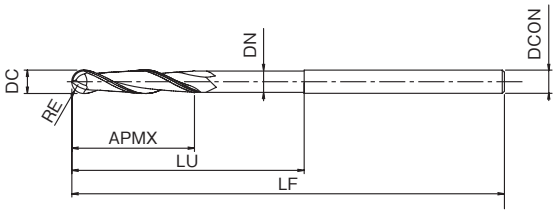
## グラファイト用DIAコート2枚刃超硬ボールエンドミルロングシャンク
**Diamond Coated 2-flute Carbide Ball End Mill with Long Shank for Graphite**

# D-GF-LS-EBDR

切削条件 Cutting Conditions | P694-1



グラファイト加工用ダイヤモンドコーティングエンドミルです。
素晴らしい工具寿命の延長をお約束します。
Employs Diamond Coating for high quality cutting of graphite materials.

# 銅・アルミ合金・プラスチック用2枚刃超硬ロングネックボールエンドミル（焼きばめ対応）

**2-flute Long Neck Carbide Ball End Mill for Copper, Aluminum Alloys and Plastics (Shrink Fit Type)**

## CAP-LN-EBD-SF

アルミ合金、プラスチック加工用オリジナルシリーズの精密微細加工対応用追加展開。最新の高速加工機、シュリンクホルダ対応を配慮し、シャンクは高精度仕様φ4に統一。切れ味の良い切れ刃がバリの発生を防止。

Original micro end mill series developed for aluminum alloy and plastics processing. Its sharp cutting edge geometry prevents the occurrence of burrs. With a standard φ4 shank, this series is applicable for the latest high-speed machining centers and shrink holders.

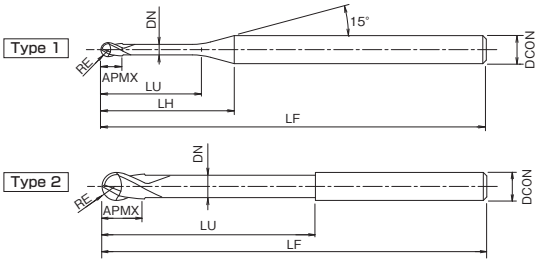
# WXLコート2枚刃超硬ロングネックボールエンドミル（深リブ形）

**WXL Coated 2-flute Long Neck Carbide Ball End Mill for Rib Processing**

## WXL-LN-EBD

切削条件 Cutting Conditions | P594



硬質潤滑被膜WXLコーティングの効果により金型材加工から銅電極加工まで幅広い用途で威力を発揮します。加工にあった有効長さをお選びください。

WXL coating with high hardness and better lubrication enable to machine wide range of applications, such as Mold machining to Copper machining. Please select proper length tool.

CARBIDE | WXL | R ±0.005 | SHRINK FIT | 30°

### ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

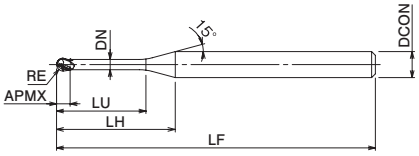
## DLCコート2枚刃超硬ロングネックボールエンドミル
**DLC Coated 2-flute Long Neck Carbide Ball End Mill**

# DLC-LN-EBD

切削条件 Cutting Conditions | P689



独自の超平滑DLCコーティングが溶着を防止します。アルミ合金などの形状加工での高速化を実現するとともに、良好な仕上げ面が得られます。
End mill with unique DLC coating with ultra lubrication. Works on extruded Aluminums eliminating weldings and better surface finish.

### ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

# WXコート2枚刃超硬ロングネックボールエンドミル（深リブ形）

**WX Coated 2-flute Long Neck Carbide Ball End Mill for Rib Processing**

## WX-LN-EBD

切削条件 Cutting Conditions | **P638-3**

加工形状に合わせて自由に有効長が選べるロングネックボールです。高じん性超硬母材が幅広い加工で安定した切削を実現します。

A long neck ball nose end mill, prepared with wider selection of effective length for various milling operations. Newly developed high hardness ultra fine carbide base material gives wide range of applications and consistent performances.

# FXコート2枚刃超硬ロングネックボールエンドミル 高精度タイプ(φ6シャンク)

**FX Coated 2-flute Long Neck Carbide Ball End Mill High-precision Type (φ6 Shank)**

## FX-LN-EBD-6

切削条件 Cutting Conditions | P667-10

高速高精度型マシニングセンタの性能を十分に引き出す高速加工用ボールエンドミルロングネックタイプです。

High speed long neck type ball end mill. Maximizes performance of high speed and high precision machining centers.

## 銅・アルミ合金・プラスチック用CrNコート2枚刃 超硬ロングネックボールエンドミル

**CrN Coated 2-flute Long Neck Carbide Ball End Mill for Copper, Aluminum Alloys and Plastics**

**CRN-LN-EBD** 切削条件 Cutting Conditions | **P682-2**

剛性の高いショート刃・ロングネック形状のため、大きな突出し量が必要となる銅電極加工にも最適です。
A highly rigid, long necked, short tooth endmill. The optimum tool for copper electrode process involving long overhangs.

# 再研磨・再コーティング

Tool Reconditioning

## 再研磨・再コーティングを 一貫対応

Coherent support system for tool reconditioning

総合工具メーカーとしてオーエスジーが長年培ってきた工具設計のノウハウとコーティング技術を
最大限に活かし新品同様の切削性能と工具寿命を実現します。
オーエスジーでは再研磨・再コーティングを当社グループ会社で対応するため一括で受け入れ可能です。

As a comprehensive cutting tool manufacturer with tool design and coating technology know-how cultivated over many years, OSG is capable of restoring used tools to like-new condition. Tool reconditioning is handled by OSG group companies with a coherent support system to enable a seamless process.

再研磨・再コーティングの
詳細はこちら
Scan for details on tool reconditioning

## 再研磨・再コーティングは環境に優しい取組みです

Tool reconditioning promotes resource conservation and is environmentally friendly

使用できなくなった工具を蘇らせ再使用することは、
省資源化と地球環境の保護活動への貢献につながります。

Tool reconditioning contributes to resource conservation by bringing worn cutting tools back to life, which is environmentally friendly and sustainable.

Type 4

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

■ワーク勾配角αに対する実有効長（Le）
Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

# FXコート2枚刃超硬エンドミル球形
**FX Coated 2-flute Carbide End Mill Sphere Type**

## FXS-EQD

切削条件 Cutting Conditions | P664

球形状の切れ刃のため立ち壁の加工においてもびびりを防止できます。アンダーカットの加工も可能です。
Reduces chattering between the side wall and peripheral cutting edges. Undercut operation is also possible.

# WXSコート3枚刃超硬ペンシルネックボールエンドミル
**WXS Coated 3-flute Pencil Neck Carbide Ball End Mill**

## PHX-PC-DBT

切削条件 Cutting Conditions | P578

深彫り加工の常識を変える高能率加工を実現します。独特なスパイラルボール刃が深彫り加工時の振動を防止し安定した高送り切削を実現します。

Changes the idea of deep milling with high efficiency machining. Unique spiral fluted ball nose gives stable high feed milling and eliminated vibrations.

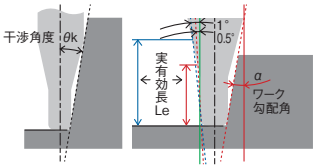
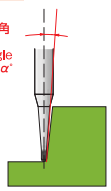
- □ = 特定代理店在庫品 Stocked by specific distributors. Contact us for price & availability.
- △ = 生産中止品（在庫をご確認下さい。） Discontinued item

Type 1

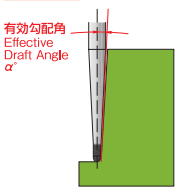


Type 2



## ■ワーク勾配角αに対する実有効長 (Le)

Effective Neck length (Le) depending on Inclined Angle (α) of workpiece



実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

# WXSコート3枚刃超硬ペンシルネックボールエンドミル
**WXS Coated 3-flute Pencil Neck Carbide Ball End Mill**

## PHX-PC-DBT

切削条件 Cutting Conditions | P578

深彫り加工の常識を変える高能率加工を実現します。独特なスパイラルボール刃が深彫り加工時の振動を防止し安定した高送り切削を実現します。

Changes the idea of deep milling with high efficiency machining. Unique spiral fluted ball nose gives stable high feed milling and eliminated vibrations.

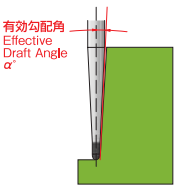
## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece



実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

# FXコート2枚刃超硬ペンシルショートネック ボールエンドミル高精度タイプ（φ6シャンク）

**FX Coated 2-flute Pencil Short Neck Carbide Ball End Mill High-precision Type (φ6 Shank)**

## FX-PCS-EBD-6 切削条件 Cutting Conditions | P667-11

**超超微粒子超硬合金と剛性の高いペンシルネックが高速、高精度、超寿命を実現します。微細形状加工や掘り込み加工でのびびり問題も解消します。**

Ultra fine grain Carbide Alloy with pencil neck design for more rigidity enable high speed ultra long tool life. Eliminates vibrations at fine shape and deep milling conditions.

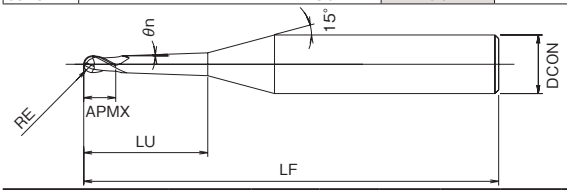
# FXコート2枚刃超硬ペンシルショートネック ボールエンドミル高精度タイプ（φ6シャンク）

**FX Coated 2-flute Pencil Short Neck Carbide Ball End Mill High-precision Type (φ6 Shank)**

## FX-PCS-EBD-6 切削条件 Cutting Conditions P667-11

**超超微粒子超硬合金と剛性の高いペンシルネックが高速、高精度、超寿命を実現します。微細形状加工や掘り込み加工でのびびり問題も解消します。**



Ultra fine grain Carbide Alloy with pencil neck design for more rigidity enable high speed ultra long tool life. Eliminates vibrations at fine shape and deep milling conditions.

有効勾配角（α°）とは、図に示すように首部勾配と外径とを結んだ角度です。加工勾配角に合わせてご使用下さい。

Effective angle (α°) refers to the angle connecting between the conical neck and the cutting edge diameter as shown in the figure. Please select the tool according to the machining angle.

| 8533270 | 25 × R5 | | | | | | ● | 576 | 61,600 |

※シャンク側端面のRは、ステップ加工時の筋発生を防止するもので、完全Rではありません。

Since radius chamfering is also provided on the end faces of the shank side, no line is marked on the boundary section during step milling. This is partial radius.

## 2枚刃CBNラジアスエンドミルショート形
**2-flute CBN End Mill Short Length with Corner Radius**

## CBN-CR-EDS

切削条件 Cutting Conditions | P626

高硬度材の加工に威力を発揮します。
Suitable for operations on quenched steels.

## FXコート6枚刃超硬ラジアスエンドミルショート形 不等リード

**FX Coated 6-flute Variable Lead Carbide End Mill Short Length with Corner Radius**

**NEO-CR-EMS** 切削条件 Cutting Conditions | P639

進化形“不等リード”の効果によりびびりを抑えて、驚異の高能率加工を実現します。

Introducing the highly evolved "variable-lead" shape. Suppresses chattering, allowing for outstanding milling performance.

# FXコート3枚刃超硬ラジアスエンドミル
**FX Coated 3-flute Carbide End Mill with Corner Radius**

## PHX-CRT

切削条件 Cutting Conditions | P575

1刃あたりの切削量を大きく取るために、工具形状を低抵抗刃型とした新発想のコーナラジアスタイプです。今までにない高送り加工が可能となります。

New concept corner radius end mills that increase metal removal per tooth with a new low-resistance cutting edge form. Previously unattainable high feed machining is now possible.

# FXコート4枚刃超硬ラジアスエンドミル ハイヘリックスショート形

**FX Coated 4-flute High Helix Carbide End Mill Short Length with Corner Radius**

## FX-CR-MG-EHS

切削条件 Cutting Conditions | P646

切れ味の良いポジの切れ刃は、加工硬化などの発生を防止。
コーナR付のため、多様なカッタパスに対応できます。

Positive and sharp cutting edge keeps work material from hardening during milling operation.

# FXコート4枚刃超硬ラジアスエンドミル 多機能強力型

**FX Coated 4-flute Carbide End Mill with Corner Radius High Speed Pocket Operation Type**

## FXS-PKE

切削条件 Cutting Conditions | P654

ポケット彫込みでの高能率加工に最適です。必要最小限の刃長のため剛性が高く、強ねじれで切りくず排出も抜群です。
High efficient contour operation in pocket. Good chip ejection.

# 銅・アルミ合金用3枚刃超硬ラジアスエンドミル ショート形

**3-flute Carbide End Mill Short Length with Corner Radius for Copper and Aluminum Alloys**

## CA-CR-ETS

切削条件 Cutting Conditions | P675

切削除去量の多いアルミ部品の加工でも、独自の溝フォームが生み出す優れた切りくず排出性で、大きな切込みと高送りを同時に実現します。

Unique fluted design gives superb chip ejection and make deep cut and high feed on Aluminum part machining.

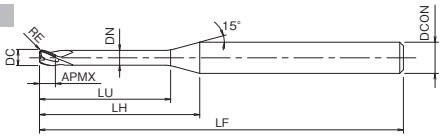
# 銅電極・高能率仕上げ用DLCコート超硬ロングネックラジアスエンドミル

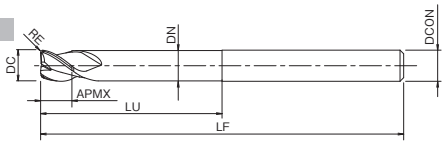
**DLC Coated High-efficiency Finishing Long Neck Carbide End Mill with Corner Radius for Copper Electrodes**

A The A Brand

## AE-CPR-N



切削条件 Cutting Conditions | P520



コーティングに色むらが発生する場合がありますが、
性能上は全く問題ありません。
End mills may have some discoloration, but it does not cause any performance problems.

## 銅・アルミ合金用3枚刃超硬ラジアスエンドミル 多機能強力型

**3-flute Carbide End Mill with Corner Radius High Speed Pocket Operation Type for Copper and Aluminum Alloys**

# CA-PKE

切削条件 Cutting Conditions | P679

高剛性のショート刃、首逃がしタイプにより、荒から仕上げ加工まで多彩なカッタパスで対応します。

Thanks to a high rigid short type and reduced neck type, wide range application from rough to finish milling is possible.

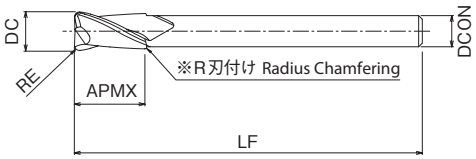
## DIAコート2枚刃超硬ラジアスエンドミル ロングシャンク

**Diamond Coated 2-flute Carbide End Mill with Corner Radius, Long Shank**

# DIA-LS-CRED

切削条件 Cutting Conditions | P692

グラファイト電極の薄肉立ち壁加工対応工具です。ステップ加工対応によりびびりやコバ欠けを防止します。シャンク側サイドにもR刃付けが施してあります。



Specially designed for thin wall Graphite electrode. Eliminates chatter and small chipping with step milling. Radius teeth on shank side also.

CARBIDE | DIA | SHRINK FIT | 30°

## DLCコート3枚刃超硬ラジアスエンドミル 多機能強力型

**DLC Coated 3-flute Carbide End Mill with Corner Radius High Speed Pocket Operation Type**

**DLC-PKE** 切削条件 Cutting Conditions | P690

独自の超平滑DLCコーティングが、アルミの高速加工はもちろん、セミドライ加工も可能とします。
Unique DLC coating with ultra lubrication makes high speed Aluminum machining, as well as dry milling.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

## ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。
No numerical value means no interference with workpiece.

# WXSコート超硬ラジアスエンドミル高精度タイプ
**WXS Coated High-precision Carbide End Mill with Corner Radius**

## WXS-CPR

切削条件 Cutting Conditions | **P615**

金型の形状加工専用高精度ブルノーズ（ラジアス）エンドミルです。耐熱性に優れるWXSコーティングにより焼入れ鋼の高速切削も可能としました。

Radius nose end mill specially designed for precision Mold milling. WXS coating with heat resistant character makes high speed milling on heat treated steels.

# WXSコート超硬ラジアスエンドミル高精度タイプ
**WXS Coated High-precision Carbide End Mill with Corner Radius**

## WXS-CPR

切削条件 Cutting Conditions | **P615**

Type 1

Type 2

金型の形状加工専用高精度ブルノーズ(ラジアス)エンドミルです。耐熱性に優れるWXSコーティングにより焼入れ鋼の高速切削も可能としました。

Radius nose end mill specially designed for precision Mold milling. WXS coating with heat resistant character makes high speed milling on heat treated steels.

# WXSコート超硬ラジアスエンドミル高精度タイプ
**WXS Coated High-precision Carbide End Mill with Corner Radius**

## WXS-CPR

切削条件 Cutting Conditions | **P615**

Type 1

Type 2

金型の形状加工専用高精度ブルノーズ（ラジアス）エンドミルです。耐熱性に優れるWXSコーティングにより焼入れ鋼の高速切削も可能としました。

Radius nose end mill specially designed for precision Mold milling. WXS coating with heat resistant character makes high speed milling on heat treated steels.

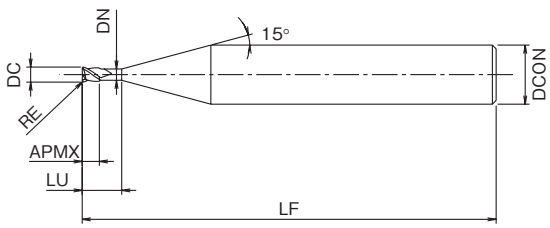
# FXコート2枚刃超硬ラジアスエンドミルショート形（φ6シャンク）

**FX Coated 2-flute Carbide End Mill Short Length with Corner Radius (φ6 Shank)**

## FX-CR-EDS-6

切削条件 Cutting Conditions | P667-8



高速高精度型マシニングセンタの性能を十分に引き出す高速加工用コーナR付きエンドミルです。

This is a corner radius end mill for high speed operations. It enhances the performance of the latest high speed & high precision machining centers.

### ■ワーク勾配角αに対する実有効長（Le）

Effective Neck length (Le) depending on Inclined Angle（α）of workpiece

実有効長欄に数値のないものは干渉なしを表します。

No numerical value means no interference with workpiece.

## WXSコート多刃超硬ラジアスエンドミル ショート形高剛性タイプ
**WXS Coated Multi-flute Carbide End Mill Short Length with Corner Radius (Highly Rigid Type)**

# FXS-CR-EMS

切削条件 Cutting Conditions | P667-12

剛性の高い高速加工用ラジアスエンドミルです。焼き入れ鋼の高速加工も可能としました。
Rigid radius end mill for high speed operations. Applicable for quenched steels.

# WXコートファインピッチ超硬ラフィングエンドミル ショート形

**WX Coated Carbide Roughing End Mill Fine Pitch Short Length**

## WX-RESF

切削条件 Cutting Conditions | P634

## 標準タイプ Standard Type

波状の刃形状が切削動力を低減するため、大きな切込みが可能です。びびり振動にも強く荒加工の高能率化を可能とします。

Large depths of cut are possible thanks to the reduction in cutting force provided by the wavelike flute form. Even during heavy chatter rough milling, high efficiency can be achieved.

CARBIDE | WX | 30°

## デジタルカタログ

カタログ

最新の総合カタログや製品カタログを時間・場所問わず閲覧できます。しおりを挟んだり、メールでカタログを共有することも可能です。

### 総合カタログ

いつでもどこでもカタログを。

### 製品カタログ

最新カタログをいち早く。

## コードスキャン

コードスキャン

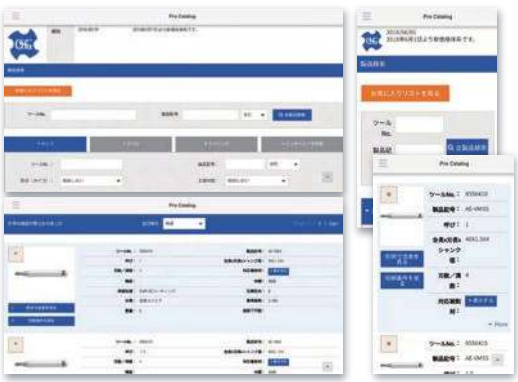
アプリ限定

バーコード・二次元コードに対応したスキャン機能です。工具のスペック情報や切削条件、検査成績表などの各種データを取得することができます。

※二次元コードは一部製品に限ります

## CADデータダウンロード

CADデータダウンロード



工具のDXFファイル・STEPファイルをパソコンやスマートフォンからいつでもダウンロードできます。

## 製品検索

製品検索

形状やサイズなどの条件から最適な工具を選定できます。また、検索した工具をお気に入りリストに登録したり、「見積依頼書」や「注文書」を作成することもできます。

アプリの使い方・ダウンロードはこちら

**さらに、製品動画やFAQサイトなどOSG情報が満載！**

# FXコート2枚刃超硬テーパエンドミルショート形
**FX Coated 2-flute Carbide Taper End Mill Short Length**

## FX-MG-TPDS

切削条件 Cutting Conditions | P653

FXコーティングにより高能率、長寿命を実現しました。一般材から焼き入れ鋼まで幅広い対応が可能です。
FX coating improves productivity and tool life. Applicable for materials such as general and quenched steels.

# 台形ランナ用2枚刃超硬テーパエンドミル
**2-flute Carbide Taper End Mill for Trapezoidal Runner**

## MG-TRC

切削条件 Cutting Conditions | P673

台形ランナ加工用としてご使用いただけるテーパ刃エンドミルです。高じん性超硬合金を採用しています。
Taper-edged end mill for trapezoidal runner applications. Made with tough carbide metal body.

# FXコート多刃超硬テーパエンドミル（深リブ形）
**FX Coated Multi-flute Carbide Taper End Mill for Rib Processing**

## FXS-RB-TPE

切削条件 Cutting Conditions | P667-17

リブ溝の高能率加工を可能とした高剛性テーパエンドミルです。
溝以外に側面加工にもご使用いただけます。
Rigid taper end mill for highly productive rib processing. Can also be used for side milling operations.

# FXコート多刃超硬テーパエンドミル（深リブ形）
**FX Coated Multi-flute Carbide Taper End Mill for Rib Processing**

## FXS-RB-TPE

切削条件 Cutting Conditions | P667-17

リブ溝の高能率加工を可能とした高剛性テーパエンドミルです。
溝以外に側面加工にもご使用いただけます。
Rigid taper end mill for highly productive rib processing. Can also be used for side milling operations.

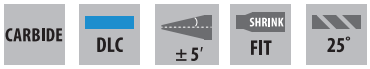
# 非鉄用DLCコート2枚刃超硬テーパエンドミル（深リブ形）



**DLC Coated 2-flute Carbide Taper End Mill for Non-ferrous Materials and Rib Processing**

# DLC-RB-TPE

ZAS（亜鉛合金）やアルミ合金金型のリブ溝加工に最適です。溶着防止に極めて優れるDLCコーティングと切れ味の良い刃形の効果によりばりの発生を抑えます。

Best of Zinc alloys, aluminum alloys. DLC coating eliminated welding and sharp edge minimize burrs.

# FXコート多刃超硬テーパボールエンドミル（深リブ形）

**FX Coated Multi-flute Taper Ball End Mill for Rib Processing**

## FXS-RB-TPB

切削条件 Cutting Conditions | P667-17

リブ溝の高能率加工を可能とした高剛性テーパエンドミルです。
自由曲面加工用としてもご使用いただけます。
Rigid taper end mill for highly productive rib processing. Can also be used as a surface milling tool.

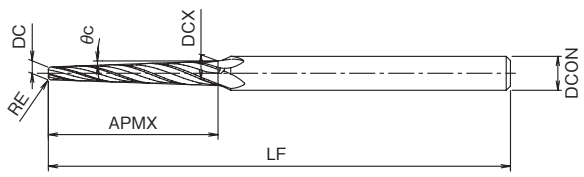
# FXコート多刃超硬テーパラジアスエンドミル（深リブ形）

**FX Coated Multi-flute Carbide Taper End Mill with Corner Radius for Rib Processing**

## FXS-RB-TPCR

切削条件 Cutting Conditions | P667-17



リブ溝の高能率加工を可能とした高剛性テーパエンドミルのラジアスエンドタイプです。

Rigid taper end mill for productive rib processing. Made with radius end edges.

# 再研磨・再コーティング

Tool Reconditioning

## 再研磨・再コーティングを 一貫対応

Coherent support system for tool reconditioning

総合工具メーカーとしてオーエスジーが長年培ってきた工具設計のノウハウとコーティング技術を
最大限に活かし新品同様の切削性能と工具寿命を実現します。
オーエスジーでは再研磨・再コーティングを当社グループ会社で対応するため一括で受け入れ可能です。

As a comprehensive cutting tool manufacturer with tool design and coating technology know-how cultivated over many years, OSG is capable of restoring used tools to like-new condition. Tool reconditioning is handled by OSG group companies with a coherent support system to enable a seamless process.

再研磨・再コーティングの
詳細はこちら
Scan for details on tool reconditioning

## 再研磨・再コーティングは環境に優しい取組みです

Tool reconditioning promotes resource conservation and is environmentally friendly

使用できなくなった工具を蘇らせ再使用することは、
省資源化と地球環境の保護活動への貢献につながります。

Tool reconditioning contributes to resource conservation by bringing worn cutting tools back to life, which is environmentally friendly and sustainable.

# 再研磨・再コーティング

Tool Reconditioning

## 再研磨・再コーティングを 一貫対応

Coherent support system for tool reconditioning

総合工具メーカーとしてオーエスジーが長年培ってきた工具設計のノウハウとコーティング技術を
最大限に活かし新品同様の切削性能と工具寿命を実現します。
オーエスジーでは再研磨・再コーティングを当社グループ会社で対応するため一括で受け入れ可能です。

As a comprehensive cutting tool manufacturer with tool design and coating technology know-how cultivated over many years, OSG is capable of restoring used tools to like-new condition. Tool reconditioning is handled by OSG group companies with a coherent support system to enable a seamless process.

再研磨・再コーティングの
詳細はこちら
Scan for details on tool reconditioning

## 再研磨・再コーティングは環境に優しい取組みです

Tool reconditioning promotes resource conservation and is environmentally friendly

使用できなくなった工具を蘇らせ再使用することは、
省資源化と地球環境の保護活動への貢献につながります。

Tool reconditioning contributes to resource conservation by bringing worn cutting tools back to life, which is environmentally friendly and sustainable.

注１）面取りを行う場合の下穴の最小値を示します。
These minimum pre-drilled hole sizes are required before chamfering operations.

加工時に先端径が問題となる場合には先端径をご確認の上、ご使用下さい。
When the point diameter of the end mill is critical for the application, please verify the point diameter before use.

先端角90°品は、先端の潰れや欠けを防止するため、
最小下穴径より内側中心部のみ140°になっています。
Items with a point angle of 90° have a 140° point angle within the minimum mill diameter to prevent the chisel edge from crushing and chipping during centering.

| 切込深さ Depth of Cut | ap 1.5D | | | | | | ae 0.2D | | | | | | | |

1. 上表は、突出し長さが工具径の3倍の場合の目安です。
2. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
3. 回転速度は基準切削速度の中央値より算出したものです。ワーク保持力、機械剛性等、使用状況により回転速度、送り速度を調整下さい。
4. 切削油剤は被削材に適したもので、発煙性の少ないものをご使用下さい。
5. 乾式の場合には、切りくず詰まりが無いようエアブローにて切りくずを除去下さい。
6. ステンレス鋼、析出硬化系ステンレス鋼、チタン合金、Ni基合金の加工には、水溶性切削油剤の使用を推奨します。
7. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
8. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し量変化による切削条件調整の目安」を参考に調整下さい (p.496参照)。

1. The above milling condition is a guideline for the overhang length is 3× D.
2. Use a rigid and precise machine and holder.
3. The rotational speed is calculated by the median of the recommended cutting speed. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
4. Please use a suitable fluid with high smoke retardant properties.
5. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
6. Please use water-soluble coolant when machining stainless steel, precipitation stainless steel, titanium alloy, Ni-based alloy.
7. Reduce speed and feed as well as depth of cut when high precision is required.
8. Adjust the speed and feed accordingly when the overhang length is longer than specified (refer to p.496).

1. 上表は、突出し長さが工具径の3倍の場合の目安です。
2. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
3. 回転速度は基準切削速度の中央値より算出したものです。ワーク保持力、機械剛性等、使用状況により回転速度、送り速度を調整下さい。
4. 切削油剤は被削材に適したもので、発煙性の少ないものをご使用下さい。
5. 乾式の場合には、切りくず詰まりが無いようエアブローにて切りくずを除去下さい。
6. ステンレス鋼、析出硬化系ステンレス鋼、チタン合金、Ni基合金の加工には、水溶性切削油剤の使用を推奨します。
7. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
8. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し量変化による切削条件調整の目安」を参考に調整下さい（下表参照）。

1. The above milling condition is a guideline for the overhang length is 3× D.
2. Use a rigid and precise machine and holder.
3. The rotational speed is calculated by the median of the recommended cutting speed. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
4. Please use a suitable fluid with high smoke retardant properties.
5. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
6. Please use water-soluble coolant when machining stainless steel, precipitation stainless steel, titanium alloy, Ni-based alloy.
7. Reduce speed and feed as well as depth of cut when high precision is required.
8. Adjust the speed and feed accordingly when the overhang length is longer than specified (see table below).

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 回転速度は基準切削速度の中央値より算出したものです。ワーク保持力、機械剛性等、使用状況により回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に適したもので、発煙性の少ないものをご使用下さい。
4. 乾式の場合には、切りくず詰まりが無いようエアブローにて切りくずを除去下さい。
5. ステンレス鋼、析出硬化系ステンレス鋼、チタン合金、Ni基合金の加工には、水溶性切削油剤の使用を推奨します。
6. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。

1. Use a rigid and precise machine and holder.
2. The rotational speed is calculated by the median of the recommended cutting speed. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
5. Please use water-soluble coolant when machining stainless steel, precipitation stainless steel, titanium alloy, Ni-based alloy.
6. Reduce speed and feed as well as depth of cut when high precision is required.

1. 上表は、突出し長さが工具径の5倍の場合の目安です。
2. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
3. ワーク保持力、機械剛性等、使用状況により回転速度、送り速度を調整下さい。
4. 切削油剤は被削材に適したもので、発煙性の少ないものをご使用下さい。
5. 乾式の場合には、切りくず詰まりが無いようエアブローにて切りくずを除去下さい。
6. ステンレス鋼，析出硬化系ステンレス鋼，チタン合金，Ni 基合金の加工には、水溶性切削油剤の使用を推奨します。
7. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
8. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し長さ変化による切削条件調整の目安」を参考に調整下さい。

1. The above milling condition is a guideline for the overhang length is 5× D.
2. Use a rigid and precise machine and holder.
3. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
4. Please use a suitable fluid with high smoke retardant properties.
5. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
6. Please use water-soluble coolant when machining stainless steel, precipitation stainless steel, titanium alloy, Ni-based alloy.
7. Reduce speed and feed as well as depth of cut when high precision is required.
8. Adjust the speed and feed accordingly when the overhang length is longer than specified.

上表は、エアブローを使用する場合のものです。

The table above is for when using air-blow.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。樹脂加工では、強固なワーク形状、固定方法の場合は送り速度が上げられます。
3. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
4. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し長さ変化による切削条件調整の目安」を参考に調整下さい (p.507参照)。
5. 切りくずが絡む場合は、回転速度、送り速度を下げてご使用下さい。
6. マグネシウム合金切削において、切削油剤を使用する場合は切削油剤メーカの推奨するものを必ずご使用下さい。また、切りくずの処理・管理にご注意下さい。発火の恐れがあります。
7. 樹脂を加工する際、切りくずの噛み込み、巻き付きを防止するため、切りくずを除去して下さい。
8. 樹脂をより高品位に加工する場合は水溶性切削油剤の使用を推奨します (ナイロン系とベークライトを除く)。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used. In resin processing, the feed rate can be increased if the shape of the workpiece and method of fixation are rigid.
3. Reduce speed and feed as well as depth of cut when high precision is required.
4. Adjust the speed and feed accordingly when the overhang length is longer than specified (refer to p.507).
5. When the chips wind around the end mill, reduce the speed and feed.
6. Please always use the appropriate cutting fluid recommended by the cutting fluid manufacturer in the machining of magnesium alloys. Be cautious with the cutting chips as they are highly flammable and may pose a serious fire risk if not properly handled.
7. When processing resin, please remove cutting chips to prevent them from getting caught or entangled.
8. For higher quality processing of resin, the use of a water-soluble cutting fluid is recommended (excluding nylon and Bakelite).

上表は、エアブローを使用する場合のものです。

The table above is for when using air-blow.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。樹脂加工では、強固なワーク形状、固定方法の場合は送り速度が上げられます。
3. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
4. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し長さ変化による切削条件調整の目安」を参考に調整下さい（p.507参照）。
5. 切りくずが絡む場合は、回転速度、送り速度を下げてご使用下さい。
6. マグネシウム合金切削において、切削油剤を使用する場合は切削油剤メーカの推奨するものを必ずご使用下さい。また、切りくずの処理・管理にご注意下さい。発火の恐れがあります。
7. 樹脂を加工する際、切りくずの噛み込み、巻き付きを防止するため、切りくずを除去して下さい。
8. 樹脂をより高品位に加工する場合は水溶性切削油剤の使用を推奨します（ナイロン系とベークライトを除く）。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used. In resin processing, the feed rate can be increased if the shape of the workpiece and method of fixation are rigid.
3. Reduce speed and feed as well as depth of cut when high precision is required.
4. Adjust the speed and feed accordingly when the overhang length is longer than specified (refer to p.507).
5. When the chips wind around the end mill, reduce the speed and feed.
6. Please always use the appropriate cutting fluid recommended by the cutting fluid manufacturer in the machining of magnesium alloys. Be cautious with the cutting chips as they are highly flammable and may pose a serious fire risk if not properly handled.
7. When processing resin, please remove cutting chips to prevent them from getting caught or entangled.
8. For higher quality processing of resin, the use of a water-soluble cutting fluid is recommended (excluding nylon and Bakelite).

上表は、エアブローを使用する場合のものです。

The table above is for when using air-blow.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。樹脂加工では、強固なワーク形状、固定方法の場合は送り速度が上げられます。
3. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
4. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し長さ変化による切削条件調整の目安」を参考に調整下さい (p.515参照)。
5. 切りくずが絡む場合は、回転速度、送り速度を下げてご使用下さい。
6. マグネシウム合金切削において、切削油剤を使用する場合は切削油剤メーカの推奨するものを必ずご使用下さい。また、切りくずの処理・管理にご注意下さい。発火の恐れがあります。
7. 樹脂を加工する際、切りくずの噛み込み、巻き付きを防止するため、切りくずを除去して下さい。
8. 樹脂をより高品位に加工する場合は水溶性切削油剤の使用を推奨します (ナイロン系とベークライトを除く)。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used. In resin processing, the feed rate can be increased if the shape of the workpiece and method of fixation are rigid.
3. Reduce speed and feed as well as depth of cut when high precision is required.
4. Adjust the speed and feed accordingly when the overhang length is longer than specified (refer to p.515).
5. When the chips wind around the end mill, reduce the speed and feed.
6. Please always use the appropriate cutting fluid recommended by the cutting fluid manufacturer in the machining of magnesium alloys. Be cautious with the cutting chips as they are highly flammable and may pose a serious fire risk if not properly handled.
7. When processing resin, please remove cutting chips to prevent them from getting caught or entangled.
8. For higher quality processing of resin, the use of a water-soluble cutting fluid is recommended (excluding nylon and Bakelite).

The table above is for when using air-blow.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。樹脂加工では、強固なワーク形状、固定方法の場合は送り速度が上げられます。
3. 加工精度を要求される場合は、回転速度、送り速度、切込み量を抑えて使用下さい。
4. 突出し長さが長くなる場合は、回転速度、送り速度を「突出し長さ変化による切削条件調整の目安」を参考に調整下さい（p.515参照）。
5. 切りくずが絡む場合は、回転速度、送り速度を下げてご使用下さい。
6. マグネシウム合金切削において、切削油剤を使用する場合は切削油剤メーカの推奨するものを必ずご使用下さい。また、切りくずの処理・管理にご注意下さい。発火の恐れがあります。
7. 樹脂を加工する際、切りくずの噛み込み、巻き付きを防止するため、切りくずを除去して下さい。
8. 樹脂をより高品位に加工する場合は水溶性切削油剤の使用を推奨します（ナイロン系とベークライトを除く）。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used. In resin processing, the feed rate can be increased if the shape of the workpiece and method of fixation are rigid.
3. Reduce speed and feed as well as depth of cut when high precision is required.
4. Adjust the speed and feed accordingly when the overhang length is longer than specified (refer to p.515).
5. When the chips wind around the end mill, reduce the speed and feed.
6. Please always use the appropriate cutting fluid recommended by the cutting fluid manufacturer in the machining of magnesium alloys. Be cautious with the cutting chips as they are highly flammable and may pose a serious fire risk if not properly handled.
7. When processing resin, please remove cutting chips to prevent them from getting caught or entangled.
8. For higher quality processing of resin, the use of a water-soluble cutting fluid is recommended (excluding nylon and Bakelite).

| 切込深さ Depth of Cut | |   | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整ください。
3. 水溶性切削油剤をご使用下さい。
4. 加工面、精度を重視される場合は、不水溶性切削油剤をご使用ください。切込深さ、送り速度を必要に応じて調整下さい。
5. 切削油剤は切削油剤メーカの推奨するものを必ずご使用下さい。加工物が変色することがあります。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Use a water soluble fluid.
4. Use a non-water-soluble cutting fluid if the machined surface and accuracy are of critical importance. Adjust the depth of cut and feed rate as necessary.
5. Always use a cutting fluid recommended by the cutting fluid manufacturer as the workpiece may discolor.

| 切込深さ Depth of Cut | | |  | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整ください。
3. 水溶性切削油剤をご使用下さい。
4. 加工面、精度を重視される場合は、不水溶性切削油剤をご使用ください。切込深さ、送り速度を必要に応じて調整下さい。
5. 切削油剤は切削油剤メーカの推奨するものを必ずご使用下さい。加工物が変色することがあります。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Use a water soluble fluid.
4. Use a non-water-soluble cutting fluid if the machined surface and accuracy are of critical importance. Adjust the depth of cut and feed rate as necessary.
5. Always use a cutting fluid recommended by the cutting fluid manufacturer as the workpiece may discolor.

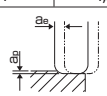
| 切込深さ Depth of Cut | | |  | | | | | | | |



1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整ください。
3. 水溶性切削油剤をご使用下さい。
4. 加工面、精度を重視される場合は、不水溶性切削油剤をご使用ください。切込深さ、送り速度を必要に応じて調整下さい。
5. 切削油剤は切削油剤メーカの推奨するものを必ずご使用下さい。加工物が変色することがあります。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Use a water soluble fluid.
4. Use a non-water-soluble cutting fluid if the machined surface and accuracy are of critical importance. Adjust the depth of cut and feed rate as necessary.
5. Always use a cutting fluid recommended by the cutting fluid manufacturer as the workpiece may discolor.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
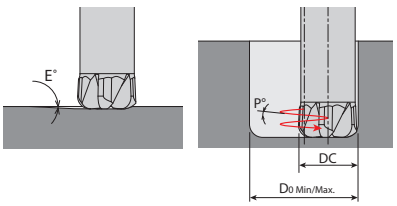
2. 上表はコーナ部円弧補間の動きを前提とした条件表です。コーナ部円弧補間のない加工（直角曲がりなど）では、上表の回転速度50～70%、切込深さ50～80%として下さい。
3. エアブローまたはMQL（オイルミストクーラント）でご使用下さい。
4. 加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、回転速度、送り速度、切込深さを調整下さい。
5. 上表は、等高線加工、工具の突出し量が4D（外径×4倍以下）の場合の目安です。突出し量が大きな場合は、びびりが発生しやすくなりますので係数を参考に、回転速度、送り速度、切込深さを調整下さい。切削速度を下げて、aeを調整して使用することも可能です。



1. Use a rigid and precise machine and holder.
2. These milling conditions are based on milling with circular interpolation at corners. For milling without circular interpolation (such as right angle corners), reduce the speed to 50-70% and the cutting depth to 50-80% of the above conditions.
3. We suggest using air blow or MQL (mist).
4. Please adjust the speed, feed and cutting depth according to actual cutting conditions.
5. These milling conditions are for overhang length of less than 4 × D. For longer overhang length, reduce the speed, feed rate, and the cutting depth in accordance to the respective coefficients to prevent chattering. It can also be used by lowering the cutting speed and adjusting the ae.

### 突出し長さ変化による切削条件調整の目安 CUTTING CONDITION GUIDE FOR CHANGES IN OVERHANG LENGTH

| 被削材 Work Material | 調質鋼（～45HRC）・プリハードン鋼 Hardened Steel・Prehardened Steel SCM・SKD61・NAK80 | | | 調質鋼 Hardened Steel | | | | | | | | | | | |

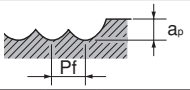
| 切込深さ Depth of Cut | |   | | | | | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | |   | | | | | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

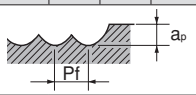
| 切込深さ Depth of Cut | |   | | | | | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

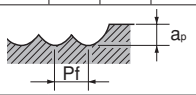
| 切込深さ Depth of Cut | |  | | | | | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | |   | | | | | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

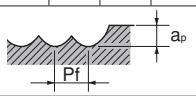
| 切込深さ Depth of Cut | |   | | | | | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

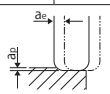
| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

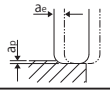
| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

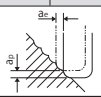
| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of $\phi$ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of $\phi$ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

| 切込深さ Depth of Cut | | |  | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. φ0.5 未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
8. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL(Minimum Quantity Lubrication / mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation(side milling) with a low machining load.
   If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
8. When RPM are insufficient, please reduce the RPM and feed rates at same ratio as listed above.

1. 加工形状、機械剛性、ホルダ剛性、ワーク保持力等の使用状況により、回転速度、送り速度、切込深さを調節下さい。
2. 回転速度、送り速度が機械性能によって上がらない場合は、回転速度、送り速度を同じ比率で下げてご使用下さい。
3. 高い切削速度や高い送り速度は、工具の消耗や加工精度を落とす原因となります。必要に応じて送り速度を下げてご使用下さい。
4. 加工形状によって加工時にビビリが発生する場合は、形状の食い込みなどの原因となる為、回転速度と送り速度を同じ比率で下げて調節しご使用下さい。
5. 精密、精細加工は静粛性に優れた専用加工機をご使用下さい。
6. 加工時は工具刃先の振れを0.005mm 以下に抑えてご使用下さい。
7. 仕上げ加工の高能率加工を行う場合、回転速度、送り速度は2 倍を上限に調節下さい。
8. 平面を仕上げる場合は、機械の振動が少ない回転域で使用し、送り速度による機械のブレが起こらないように加工下さい。
9. 工具コーナ半径部で曲面形状の仕上げ加工を行う場合は、加工ピッチ（カスプハイトを考慮した）を変えてご使用下さい。
10. 傾斜切込み角度は、0.3˚～0.5˚を目安に設定をして下さい。
11. 切込深さが切削条件表より小さい場合、送り速度を最大１５０%を目安に調整して加工も可能です。
12. 切込深さが切削条件表より大きくなる場合は、最大６０%に減速する事で安定した加工が可能です。

1. Adjust the speed, feed, and depth of cut in according to the operating conditions, including the machining shape, machine and, holder rigidity, and workholding force.
2. If the speed and feed rates cannot be increased due to equipment capability, operate by reducing the speed and feed rates at the same ratio.
3. High cutting speeds and feed rates can cause wear and/or reduce machining precision. Therefore, please reduce the feed as needed.
4. Chattering may occur depending on the shape of the part, which can damages. Reduce the speed and feed rate at the same ratio to avoid chattering.
5. For precise, detailed machining, use a dedicated machine that operates less chattering.
6. Keep the runout at the tip of the end mill below 0.005mm.
7. To perform finish machining with a high level of efficiency, keep the speed and feed rates below 2 times.
8. To finish a flat surface, remain speed range in a minimal amount of equipment vibration and feed rate not causing the equipment to wobble.
9. To finish machining a curved surface using the corner radius of the tool, operate by changing the machining pitch.
10. Set the inclined cut angle between approximately 0.3˚ to 0.5˚
11. When the depth of cut is less than the specified amount as listed above, the feed rate can be increased up to 150%.
12. When the depth of cut is greater than the specified amount as listed above, the feed rate can be reduced by no more than 60% to ensure stable milling.

1. 上記の突き出し長別条件は目安です。実際の加工条件に合わせて調節をして下さい。
2. 機械、ホルダは剛性の高いものをご使用下さい。
3. 工具の振れ精度を最小限に抑えてご使用下さい。
4. 切削油剤は被削材に適したもので、発煙性の少ないものを選定して下さい。通常エアブローを推奨致します。
5. 走査線加工を行う場合は、aeの数値を使用せずに、apの数値を参考にご使用下さい。
6. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
7. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
8. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
9. 切込深さが切削条件表より小さい場合、送り速度を最大１５０%を目安に調整して加工も可能です。
10. 切込深さが切削条件表より大きくなる場合は、最大６０%に減速する事で安定した加工が可能です。

1. The above mentioned conditions according to projection lengths are intended as general guidelines for reference only. Adjustments should be made based on actual milling conditions.
2. Highly rigid machines and tool holders should be used.
3. Tool vibrations should be kept at a minimum level for maximum accuracy.
4. Under general machining condition, air-blow cutting method is recommended.
5. In the case of linear machining, do not use the ae value, instead refer to the ap value.
6. More stable high-feed machining in the corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
7. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
8. When cutting at greater than the recommended cutting angle, reduce the feed.
9. When the depth of cut is less than the specified amount as listed above, the feed rate can be increased up to 150%.
10. When the depth of cut is greater than the specified amount as listed above, the feed rate can be reduced by no more than 60% to ensure stable milling.

RE 1.5～3 NEXT

1. 上記の突き出し量別条件は目安です。実際の加工条件に合わせて調節下さい。
2. R0.5～R2.5までは標準状態での首元でチャッキングした工具突き出し加工条件です。
3. 機械、ホルダは剛性の高いものをご使用下さい。
4. 工具の振れ精度を最小限に抑えてご使用下さい。
5. 走査線加工を行う場合は、Pfの数値を使用せずに、apの数値を参考にご使用下さい。
6. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
7. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
8. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
9. 切込深さが切削条件表より小さい場合、送り速度を最大１５０%を目安に調整して加工も可能です。
10. 切込深さが切削条件表より大きくなる場合は、最大６０%に減速する事で安定した加工が可能です。

ボールエンドミルをご使用の場合、「同工具径の」ラジアスエンドミルと比較して、前カッタパス(LAST PITCHがない状態)における削り残しが(コーナーR部の大きさによる切削抵抗による工具の倒れが大きい)多いため、荒(削り残し補正パス)・仕上げ加工の2回(右の図の2重線の様に)に分けて等高線加工をする事によってリブ溝の「加工」精度を上げることが出来ます。

In comparison to the same tool diameters of radius end mill, ball end mill machine less material per pass (large corner radius generate cutting resistance which tilt ball end mill largely). In order to improve the precision of the ribs, please separate the contour milling in roughing (correction of unmachined area)and finishing (shown as double lined area in figure on right) procedure.

1. The above mentioned conditions according to projection lengths are intended as general guidelines for reference only. Adjustments should be made based on actual milling conditions.
2. For 0.5R-2.5R, the machining conditions are based on chucking the tool up to the base of the neck.
3. Highly rigid machines and tool holders should be used.
4. Tool vibrations should be kept at a minimum level for maximum accuracy.
5. In the case of linear machining, do not use the Pf value, instead refer to the ap value.
6. More stable high-feed machining in the corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
7. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
8. When cutting at greater than the recommended cutting angle, reduce the feed.
9. When the depth of cut is less than the specified amount as listed above, the feed rate can be increased up to 150%.
10. When the depth of cut is greater than the specified amount as listed above, the feed rate can be reduced by no more than 60% to ensure stable milling.

1. 上記の突き出し量別条件は目安です。実際の加工条件に合わせて調節下さい。
2. R0.5～R2.5までは標準状態での首元でチャッキングした工具突き出し加工条件です。
3. 機械、ホルダは剛性の高いものをご使用下さい。
4. 工具の振れ精度を最小限に抑えてご使用下さい。
5. 走査線加工を行う場合は、Pfの数値を使用せずに、apの数値を参考にご使用下さい。
6. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
7. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
8. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
9. 切込深さが切削条件表より小さい場合、送り速度を最大１５０%を目安に調整して加工も可能です。
10. 切込深さが切削条件表より大きくなる場合は、最大６０%に減速する事で安定した加工が可能です。

1. The above mentioned conditions according to projection lengths are intended as general guidelines for reference only. Adjustments should be made based on actual milling conditions.
2. For 0.5R-2.5R, the machining conditions are based on chucking the tool up to the base of the neck.
3. Highly rigid machines and tool holders should be used.
4. Tool vibrations should be kept at a minimum level for maximum accuracy.
5. In the case of linear machining, do not use the Pf value, instead refer to the ap value.
6. More stable high-feed machining in the corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
7. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
8. When cutting at greater than the recommended cutting angle, reduce the feed.
9. When the depth of cut is less than the specified amount as listed above, the feed rate can be increased up to 150%.
10. When the depth of cut is greater than the specified amount as listed above, the feed rate can be reduced by no more than 60% to ensure stable milling.

ボールエンドミルをご使用の場合、「同工具径の」ラジアスエンドミルと比較して、前カッタパス(LAST PITCHがない状態)における削り残しが(コーナーR部の大きさによる切削抵抗による工具の倒れが大きい)多いため、荒(削り残し補正パス)・仕上げ加工の２回(右の図の２重線の様に)に分けて等高線加工をする事によってリブ溝の「加工」精度を上げることが出来ます。

In comparison to the same tool diameters of radius end mill, ball end mill machine less material per pass (large corner radius generate cutting resistance which tilt ball end mill largely). In order to improve the precision of the ribs, please separate the contour milling in roughing (correction of unmachined area)and finishing (shown as double lined area in figure on right) procedure.

※1 Last Pitch とは、溝切削、ポケット加工時の側面方向への切削抵抗による逃げや食い込みを考慮した経路つくりの場合に設定する「最終輪郭ピッチ」の目安値です。

1. 上記の突き出し量別条件は目安です。実際の加工条件に合わせて調節をして下さい。
2. 有効長でチャッキングした工具突き出し加工条件です。
3. 機械、ホルダは剛性の高いものをご使用下さい。
4. 工具の振れ精度を最小限に抑えてご使用下さい。
5. 走査線加工を行う場合は、Pfの数値を使用せずに、apの数値を参考にご使用下さい。
6. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
7. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
8. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
9. 切込深さが切削条件表より小さい場合、送り速度を最大１５０%を目安に調整して加工も可能です。
10. 切込深さが切削条件表より大きくなる場合は、最大６０%に減速する事で安定した加工が可能です。

ボールエンドミルをご使用の場合、「同工具径の」ラジアスエンドミルと比較して、前カッタパス(LAST PITCHがない状態)における削り残しが(コーナーR部の大きさによる切削抵抗による工具の倒れが大きい)多いため、荒(削り残し補正パス)・仕上げ加工の２回(右の図の２重線の様に)に分けて等高線加工をする事によってリブ溝の「加工」精度を上げることが出来ます。
In comparison to the same tool diameters of radius end mill, ball end mill machine less material per pass (large corner radius generate cutting resistance which tilt ball end mill largely). In order to improve the precision of the ribs, please separate the contour milling in roughing (correction of unmachined area)and finishing (shown as double lined area in figure on right) procedure.

※1. The "Last Pitch" is the standard final contour pitch value calculated based on slotting and pocket milling paths including runout and overcut caused by lateral cutting forces.

1. The above cutting conditions based on overhang length are to be used as general guideline. Adjustments may be necessary depending on actual milling condition.
2. Overhang cutting conditions based on the effective length of the tool attached to the holder.
3. Highly rigid machines and tool holders should be used.
4. Tool vibrations should be kept at a minimum level for maximum accuracy.
5. In the case of linear machining, do not use the Pf value, instead refer to the ap value.
6. More stable high-feed machining in the corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
7. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
8. When cutting at greater than the recommended cutting angle, reduce the feed.
9. When the depth of cut is less than the specified amount as listed above, the feed rate can be increased up to 150%.
10. When the depth of cut is greater than the specified amount as listed above, the feed rate can be reduced by no more than 60% to ensure stable milling.

|---|---|
| DC<φ1 | 0.1D |
| φ1≦DC<φ3 | 0.3D |
| φ3≦DC | 0.5D |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. びびりが発生する時は、回転速度、送り速度を同じ割合で下げてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

1. Use a rigid and precise machine and holder.
2. When chattering occurs, reduce the speed and feed at the same ratio.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. Refer to the table above to set the milling conditions in accordance with the actual situation.

| φ1≦DC＜φ3 | 0.3D |
| φ3≦DC | 0.5D |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. びびりが発生する時は、回転速度、送り速度を同じ割合で下げてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

1. Use a rigid and precise machine and holder.
2. When chattering occurs, reduce the speed and feed at the same ratio.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. Refer to the table above to set the milling conditions in accordance with the actual situation.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. びびりが発生する時は、回転速度、送り速度を同じ割合で下げてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

1. Use a rigid and precise machine and holder.
2. When chattering occurs, reduce the speed and feed at the same ratio.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. Refer to the table above to set the milling conditions in accordance with the actual situation.

## WXL-EMS
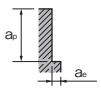
## 高速側面切削



⚠ 加工時に発生する火花や破損による発熱で引火・火災の危険があります。
防火対策を必ず行って下さい。

HIGH-SPEED SIDE MILLING

Caution: Sparks generated during operation or heat caused by tool breakage can cause fire. Be sure to use all proper fire-prevention measures.

1. 高速高精度のマシニングセンタを利用した場合の、軽切込みの切削における基準条件表です。
2. 摩耗が進行すると火花が発生しますので、発火性のある切削油剤は絶対に使用しないで下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

1. The indicated speeds and feeds are for high speed light milling with high speed/high precision machining centers.
2. Tools can cause sparks. Do not use flammable fluids.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. Refer to the table above to set the milling conditions in accordance with the actual situation.

切込深さ Depth of Cut

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

切込深さ Depth of Cut

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

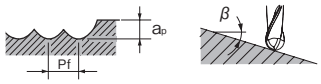
| 切込深さ Depth of Cut | |  ap（1回の切込み） Depth of Cut | | | | | | | | | | | |



1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. L/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with an L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

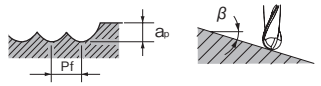
| 切込深さ Depth of Cut |  | | | | | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
3. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

※工具突出し量が大きい場合は回転速度、送り速度を下げて下さい。
※※傾き角βが15°以下の加工では、上記表の回転速度、送り速度を1.5～2倍に上げることが可能です。



1. Use a rigid and precise machine and holder.
2. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
3. Refer to the table above to set the milling conditions in accordance with the actual situation.

※ When the length of tool extension from the machine is long, reduce the speed and feed.
※※ When β is less than 15°, speed and feed in the above table can be increased 1.5～2 times.

## WXL-EBD
## 高速切削 HIGH-SPEED LIGHT MILLING

⚠ 加工時に発生する火花や破損による発熱で引火・火災の危険があります。
防火対策を必ず行って下さい。

Caution: Sparks generated during operation or heat caused by tool breakage can cause fire. Be sure to use all proper fire-prevention measures.

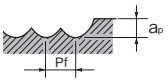
1. 高速高精度のマシニングセンタを利用した場合の、軽切込みの切削における基準条件表です。
2. 摩耗が進行すると火花が発生しますので、発火性のある切削油剤は絶対に使用しないで下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

※傾き角βが15°以下の加工では、上記表の回転速度、送り速度を1.2～1.5倍に上げることが可能です。



1. The indicated speeds and feeds are for high speed light milling with high speed/high precision machining centers.
2. Because tools can cause sparks, do not use flammable fluids.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. Refer to the table above to set the milling conditions in accordance with the actual situation.

※ When β is less than 15°, speed and feed in the above table can be increased 1.2～1.5 times.

切込深さ Depth of Cut

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

切込深さ Depth of Cut

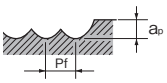
1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

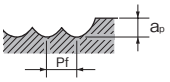
| 切込深さ Depth of Cut | |  | | | | | | | | | | | | | | | |



1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ 0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

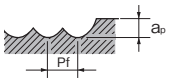
| 切込深さ Depth of Cut | |  | | | | | | | | | | | | | | | |

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

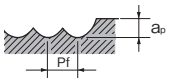
切込深さ Depth of Cut

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。



1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

| 切込深さ Depth of Cut | |  | | | | | | | | | | | | | | | |

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL/D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of φ0.5 (R0.25) or less, or L/D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

| 切込深さ Depth of Cut |   | | | | | | | | | | | | | | | |

1. 高速高精度のマシニングセンタを利用した場合の、軽切込みの切削における基準条件表です。
2. 摩耗が進行すると火花が発生しますので、発火性のある切削油剤は絶対に使用しないで下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表の値はあくまでも目安です。実際の加工における切削条件は上表を参考に状況に応じて設定下さい。

※傾き角βが15°以下の加工では、上記表の回転速度、送り速度を1.2～1.5倍に上げることが可能です。
※※お使いの工作機械が回転数に達しない場合は、使用できる最高回転数をお使い下さい。

1. The indicated speeds and feeds are for high speed light milling with high speed/high precision machining centers.
2. Because tools can cause sparks, do not use flammable fluids.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. Refer to the table above to set the milling conditions in accordance with the actual situation.

※ When β is less than 15°, speed and feed in the above table can be increased 1.2～1.5 times.
※※ If your machine tool does not attain the indicated speed, operate it at the highest possible speed.

⚠ 加工時に発生する火花や破損による発熱で引火・火災の危険があります。
防火対策を必ず行って下さい。

Caution: Sparks generated during operation or heat caused by tool breakage can cause fire. Be sure to use all proper fire-prevention measures.

切込深さ Depth of Cut

1. 機械、ホルダは剛性の高いものをご使用下さい。剛性が低い場合は切削条件を抑えて下さい。
2. 工具の振れ精度を最小限に抑えてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. コーナ部切削や取り残し加工の際には、切込深さと送り速度を70%程度下げてご使用下さい。
5. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
6. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
7. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
8. 切削負荷が変動する場合や、加工精度を要求される場合には、上記よりも条件を抑えてご使用下さい。
9. 回転速度が表示より上がらない場合は、回転数を機械に合わせて落とした比率分の送り速度も落としてご使用下さい。
10. 上記の条件表は加工目安です。加工条件に合わせて加工条件の調節を行って下さい。
11. 切削条件は荒取り後の中引き加工を想定した条件になります。
12. 平坦部を含めた荒取り加工が多い場合、びびりが発生し易くなります。
13. 切込深さが小さい場合は、適正な切削速度になるよう回転速度を上げてびびりを抑制下さい。

1. Highly rigid machines and tool holders should be used. If not, machining should be kept below above-mentioned conditions.
2. Tool vibrations should be kept at a minimum level for maximum accuracy.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. For the milling of corners or removal of residue, reduce the cutting depth and feed to 70%.
5. More stable high-feed machining in corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
6. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
7. When cutting at greater than the recommended cutting angle, reduce the feed.
8. When cutting load is fluctuating, or when higher milling accuracy is required, keep machining conditions below the above-mentioned values.
9. When the rotational speed does not meet the recommended conditions, reduce the feed in proportion to the RPM that is suitable for your machine.
10. The chart above is intended as general guidelines for reference only. The given values should be adjusted individually based on actual machining conditions.
11. The cutting conditions are intended for intermediate machining after roughing.
12. When the work includes extensive roughing including flat areas, chattering is more likely to occur.
13. If the cutting depth is shallow, increase the cutting speed appropriately to minimize chattering.

切込深さ Depth of Cut

1. 機械、ホルダは剛性の高いものをご使用下さい。剛性が低い場合は切削条件を抑えて下さい。
2. 工具の振れ精度を最小限に抑えてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. コーナ部切削や取り残し加工の際には、切込深さと送り速度を70%程度下げてご使用下さい。
5. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
6. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
7. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
8. 切削負荷が変動する場合や、加工精度を要求される場合には、上記よりも条件を抑えてご使用下さい。
9. 回転速度が表示より上がらない場合は、回転数を機械に合わせて落とした比率分の送り速度も落としてご使用下さい。
10. 上記の条件表は加工目安です。加工条件に合わせて加工条件の調節を行って下さい。
11. 切削条件は荒取り後の中引き加工を想定した条件になります。
12. 平坦部を含めた荒取り加工が多い場合、びびりが発生し易くなります。
13. 切込深さが小さい場合は、適正な切削速度になるよう回転速度を上げてびびりを抑制下さい。

1. Highly rigid machines and tool holders should be used. If not, machining should be kept below above-mentioned conditions.
2. Tool vibrations should be kept at a minimum level for maximum accuracy.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. For the milling of corners or removal of residue, reduce the cutting depth and feed to 70%.
5. More stable high-feed machining in corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
6. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
7. When cutting at greater than the recommended cutting angle, reduce the feed.
8. When cutting load is fluctuating, or when higher milling accuracy is required, keep machining conditions below the above-mentioned values.
9. When the rotational speed does not meet the recommended conditions, reduce the feed in proportion to the RPM that is suitable for your machine.
10. The chart above is intended as general guidelines for reference only. The given values should be adjusted individually based on actual machining conditions.
11. The cutting conditions are intended for intermediate machining after roughing.
12. When the work includes extensive roughing including flat areas, chattering is more likely to occur.
13. If the cutting depth is shallow, increase the cutting speed appropriately to minimize chattering.

切込深さ
Depth of Cut

1. 機械、ホルダは剛性の高いものをご使用下さい。剛性が低い場合は切削条件を抑えて下さい。
2. 工具の振れ精度を最小限に抑えてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. コーナ部切削や取り残し加工の際には、切込深さと送り速度を70%程度下げてご使用下さい。
5. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
6. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
7. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
8. 切削負荷が変動する場合や、加工精度を要求される場合には、上記よりも条件を抑えてご使用下さい。
9. 回転速度が表示より上がらない場合は、回転数を機械に合わせて落とした比率分の送り速度も落としてご使用下さい。
10. 上記の条件表は加工目安です。加工条件に合わせて加工条件の調節を行って下さい。
11. 切削条件は荒取り後の中引き加工を想定した条件になります。
12. 平坦部を含めた荒取り加工が多い場合、びびりが発生し易くなります。
13. 切込深さが小さい場合は、適正な切削速度になるよう回転速度を上げてびびりを抑制下さい。

1. Highly rigid machines and tool holders should be used. If not, machining should be kept below above-mentioned conditions.
2. Tool vibrations should be kept at a minimum level for maximum accuracy.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. For the milling of corners or removal of residue, reduce the cutting depth and feed to 70%.
5. More stable high-feed machining in corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
6. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
7. When cutting at greater than the recommended cutting angle, reduce the feed.
8. When cutting load is fluctuating, or when higher milling accuracy is required, keep machining conditions below the above-mentioned values.
9. When the rotational speed does not meet the recommended conditions, reduce the feed in proportion to the RPM that is suitable for your machine.
10. The chart above is intended as general guidelines for reference only. The given values should be adjusted individually based on actual machining conditions.
11. The cutting conditions are intended for intermediate machining after roughing.
12. When the work includes extensive roughing including flat areas, chattering is more likely to occur.
13. If the cutting depth is shallow, increase the cutting speed appropriately to minimize chattering.

切込深さ Depth of Cut

1. 機械、ホルダは剛性の高いものをご使用下さい。剛性が低い場合は切削条件を抑えて下さい。
2. 工具の振れ精度を最小限に抑えてご使用下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. コーナ部切削や取り残し加工の際には、切込深さと送り速度を70%程度下げてご使用下さい。
5. CAMや機械側でコーナ部のR挿入もしくは減速を設定することで、より安定した高送り加工が可能となります。
6. コーナ部等切削負荷が変動する場合や加工精度を要求される場合には、回転速度を抑えてご使用下さい。
7. 推奨傾斜切込み角度以上で加工される場合には、送り速度を下げてご使用下さい。
8. 切削負荷が変動する場合や、加工精度を要求される場合には、上記よりも条件を抑えてご使用下さい。
9. 回転速度が表示より上がらない場合は、回転数を機械に合わせて落とした比率分の送り速度も落としてご使用下さい。
10. 上記の条件表は加工目安です。加工条件に合わせて加工条件の調節を行って下さい。
11. 切削条件は荒取り後の中引き加工を想定した条件になります。
12. 平坦部を含めた荒取り加工が多い場合、びびりが発生し易くなります。
13. 切込深さが小さい場合は、適正な切削速度になるよう回転速度を上げてびびりを抑制下さい。

1. Highly rigid machines and tool holders should be used. If not, machining should be kept below above-mentioned conditions.
2. Tool vibrations should be kept at a minimum level for maximum accuracy.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. For the milling of corners or removal of residue, reduce the cutting depth and feed to 70%.
5. More stable high-feed machining in corners can be attained by setting an R insertion or deceleration on the CAM or machine side.
6. When cutting load fluctuates (in the corners, etc.) or when high precision is required, be sure to control the rotational speed.
7. When cutting at greater than the recommended cutting angle, reduce the feed.
8. When cutting load is fluctuating, or when higher milling accuracy is required, keep machining conditions below the above-mentioned values.
9. When the rotational speed does not meet the recommended conditions, reduce the feed in proportion to the RPM that is suitable for your machine.
10. The chart above is intended as general guidelines for reference only. The given values should be adjusted individually based on actual machining conditions.
11. The cutting conditions are intended for intermediate machining after roughing.
12. When the work includes extensive roughing including flat areas, chattering is more likely to occur.
13. If the cutting depth is shallow, increase the cutting speed appropriately to minimize chattering.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
   調質鋼の切削では、MQL（オイルミストクーラント）を推奨します。
3. 「外周R（RE2）使用」は外周刃R中間位置を使用する際の目安です。
   加工形状、機械剛性、ワーク、保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. 回転速度を変更する場合、回転速度と送り速度を同じ比率で変更下さい。

1. Use a rigid and precise machine and holder.
2. Use a coolant with low air-blow or fuming property according to the work material. MQL (oil mist coolant) is recommended for cutting hardened steels.
3. "Using peripheral edge R (RE2)" is the guide to use the intermediate position of peripheral edge R. Please adjust the rotation speed, feed rate and cutting pitch based on the cutting shape, machine rigidity, workpiece and holding conditions.
4. When chattering, vibration or abnormal cutting noise occurs, please adjust the rotation speed, feed rate and cutting pitch.
5. In order to change the feed rotation speed, both the rotation speed and the feed rate should be changed at the same ratio.

1. エアブローでご使用下さい。切削油剤を使用する場合は発煙の少ないものを選定して下さい。尚、ステンレス鋼、チタン合金の切削には切削油剤をご使用下さい。
2. びびりを発生する場合は回転速度、送り量を同じ割合で下げてご使用下さい。または、切込深さを減らすか、切込深さ、回転速度、送り量のすべてを減じてご使用下さい。
3. 機械、ホルダは剛性のある精度の高いものをご使用下さい。

1. Use air blow. When using cutting fluids, use high-quality fluid with high smoke retardant properties. Use a cutting fluid for cutting stainless steel and titanium alloy steels.
2. When chattering occurs, reduce the speed and feed simultaneously. Alternatively, use it at a reduced cutting depth. Or, reduce the cutting depth, speed, and feed rate.
3. Use a rigid and precision machine and holder.

## デジタルカタログ

カタログ

最新の総合カタログや製品カタログを時間・場所問わず閲覧できます。しおりを挟んだり、メールでカタログを共有することも可能です。

### 総合カタログ

いつでもどこでもカタログを。

### 製品カタログ

最新カタログをいち早く。

## コードスキャン

コードスキャン

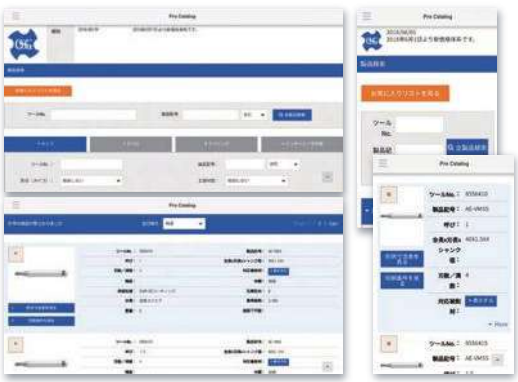
アプリ限定

バーコード・二次元コードに対応したスキャン機能です。工具のスペック情報や切削条件、検査成績表などの各種データを取得することができます。

※二次元コードは一部製品に限ります

## CADデータダウンロード

CADデータダウンロード



工具のDXFファイル・STEPファイルをパソコンやスマートフォンからいつでもダウンロードできます。

## 製品検索

製品検索

形状やサイズなどの条件から最適な工具を選定できます。また、検索した工具をお気に入りリストに登録したり、「見積依頼書」や「注文書」を作成することもできます。

アプリの使い方・ダウンロードはこちら

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。

1. Use a rigid and precise machine and holder.
2. Use an air blow or a suitable cutting fluid with high smoke retardant properties. When machining carbon steels or hardened steels, using MQL(Minimum Qiantity Lubrication / oil mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。

1. Use a rigid and precise machine and holder.
2. Use an air blow or a suitable cutting fluid with high smoke retardant properties. When machining carbon steels or hardened steels, using MQL(Minimum Qiantity Lubrication / oil mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
7. 形状精度を必要とする場合、ゼロカットをお勧めします。

1. Use a rigid and precise machine and holder.
2. Use an air blow or a suitable cutting fluid with high smoke retardant properties. When machining carbon steels or hardened steels, using MQL(Minimum Qiantity Lubrication / oil mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
7. When the workpiece requires precision shaping, re-running the end mill in the identical tool path is recommended.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。調質鋼の切削では、MQL（オイルミストクーラント）を推奨いたします。
3. 上表は、等高線加工（側面）の負荷の少ない加工形状での目安です。加工形状、機械剛性、ワーク保持等の状況により、回転速度、送り速度、切込深さを調整下さい。
4. びびり、振動、異常な切削音が発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. Z切込時のアプローチ方法として、円弧（ヘリカル）、傾斜（ランプ）での加工をお勧めします。
6. 加工精度を要求される場合は、回転速度、送り速度、切込量を抑えて使用下さい。
7. 形状精度を必要とする場合、ゼロカットをお勧めします。

1. Use a rigid and precise machine and holder.
2. Use an air blow or a suitable cutting fluid with high smoke retardant properties. When machining carbon steels or hardened steels, using MQL(Minimum Qiantity Lubrication / oil mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
4. Adjust the speed, feed rate, and depth of cut if chattering, vibration or abnormal grinding sounds occur.
5. Helical or ramp milling is recommended during the approach of a Z cut.
6. Adjust the speed, feed rate, and the depth of the cut according to the shape of the work, rigidity of the machine, and how the work is held.
7. When the workpiece requires precision shaping, re-running the end mill in the identical tool path is recommended.

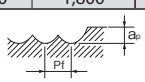
1. 機械、ホルダは剛性のある、精度の高いものをご使用下さい。
2. エアブローまたはMQL(オイルミストクーラント)でご使用下さい。
3. 上表は、等高線加工（側面加工）の負荷の少ない加工形状での目安です。
   加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、異常な切削音、振動、びびりが発生する場合、回転速度、送り速度、切込深さを調整下さい。
4. 切込深さが小さい場合、回転速度、送り速度をさらに上げることが可能です。
   ●エンドミルの選定ガイドライン
   切込みを増したい場合は、FX重切削用強力ボールシリーズ(FX-HS-EBDS)を、送り速度を高めたい場合は、FX多刃ボールシリーズ（FXS-EBT,FXS-EBM)をご使用下さい。

1. Use a rigid and precise machine and holder.
2. Using air brow or MQL (oil mist coolant) is recommended.
3. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibrationor chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc.,please adjust the speed, feed and the depth of cut.
4. Cutting speed and feed rate can be increased in case of lower depth of cut.
   ● As a guideline in selecting end mills,
   To increase the depth of cut, use the FX Heavy Cutting Strong Ball Series (FX-HS-EBDS).
   To increase the feed rate, use the FX Multiple Flute Ball Series (FX-EBT, FXS-EBM).

# WXS-EBD

## 高速切削



⚠ 加工時に発生する火花や破損による発熱で引火、火災の危険性があります。
防火対策を必ず行って下さい。高速、高精度のマシニングセンタを利用した場合の基準条件表です。

HIGH-SPEED LIGHT MILLING

Caution:Sparks generated during operation or heat caused by tool breakage can cause fire. Be sure to use all proper fire-prevention measures.
The conditions below are for high speed/high precision machining centers.

●加工パスは等高線加工を前提としています。

The machining path is on condition of contouring line operation.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. エアブローまたはMQL（オイルミスト）でご使用下さい。
3. 機械の回転速度が上がらない場合は、できるだけ最高回転速度で使用し、送り速度を調整して下さい。
4. コーナ部等負荷が大きい加工には、回転速度、送り速度ともに下げて使用下さい。
5. エンドミル取付け時の刃先の振れは、10μm未満に抑えて下さい。

1. Use a rigid and precise machine and holder.
2. We suggest using air blow or MQL(mist).
3. When using low speed machines, use the maximum speed and adjust the feed rate.
4. During heavy load operations such as corner processing, reduce the speed and feed.
5. The run out of the end mill should be within 10μm after chucking.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に適したもので、発煙性のないものをご使用下さい。
4. 乾式の場合には、切りくず詰まりが無いよう、エアブローにて切りくずを除去して下さい。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.

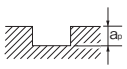
# 超硬エンドミル切削条件基準表 CUTTING CONDITIONS FOR CARBIDE END MILLS

## WX-PHSS



### 高速切削用

⚠ 加工時に発生する火花や破損による発熱で引火・火災の危険があります。
防火対策を必ずおこなって下さい。
高速高精度のマシニングセンタを利用した場合の基準条件表です。

### HIGH-SPEED LIGHT MILLING

Caution: Sparks generated during operation or heat caused by tool breakage can cause fire. Be sure to use all proper fire-prevention measures.
The conditions below are for high speed / high precision machining centers.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に適したもので、発煙性のないものをご使用下さい。
4. 乾式の場合には、切りくず詰まりが無いよう、エアブローにて切りくずを除去して下さい。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.

1. エアブローでご使用下さい。切削油剤を使用する場合は発煙の少ないものを選定して下さい。尚、ステンレス鋼、チタン合金の切削には切削油剤をご使用下さい。
2. びびりを発生する場合は回転速度、送り量を同じ割合で下げてご使用下さい。または、切込深さを減らすか、切込深さ、回転速度、送り量のすべてを減じてご使用下さい。
3. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
4. 標準(30°)ねじれタイプと強(43°)ねじれタイプの使い分けは上表内の選定基準を参考にして下さい。

1. Use air blow. When using cutting fluids, use high-quality fluid with high smoke retardant properties. Use a cutting fluid for cutting stainless steel and titanium alloy steels.
2. When chattering occurs, reduce the speed and feed simultaneously. Alternatively, use it at a reduced cutting depth. Or, reduce the cutting depth, speed, and feed rate.
3. Use a rigid and precision machine and holder.
4. Refer to the selection criteria in the table above in order to determine whether to use the standard(30°) or high(43°) twisted type.

| 切込深さ Depth of Cut |  | |  | | | | | | | | | |

| | ap | ae |
|---|---|---|
| RE≦2 | 0.2×コーナ半径(RE) | 0.5D |
| 2<RE | 0.5mm | 0.5D |

| | ap | ae |
|---|---|---|
| RE≦2 | 0.2×コーナ半径(RE) | 0.5D |
| 2<RE | 0.4mm | 0.5D |

| | ap | ae |
|---|---|---|
| RE≦2 | 0.1×コーナ半径(RE) | 0.5D |
| 2<RE | 0.2mm | 0.5D |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 上表はコーナ部円弧補間の動きを前提とした条件表です。コーナ部円弧補間のない加工（直角曲がりなど）では、上表の回転速度50～70%、切込深さ50～80%として下さい。
3. エアブローまたはMQL（オイルミストクーラント）でご使用下さい。
4. 加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、回転速度、送り速度、切込深さを調整下さい。
5. Z軸の進入は、加工傾斜角度（β）がβ≦2°で、上表の送り速度30～60%に下げてご使用下さい。
6. 上表は、等高線加工、工具の突出し量が4D（外径x 4倍以下）の場合の目安です。突出し量が大きな場合は、びびりが発生しやすくなりますので係数を参考に、回転速度、送り速度、切込深さを調整下さい。

1. Use a rigid and precise machine and holder.
2. These milling conditions are based on milling with circular interpolation at corners. For milling without circular interpolation (such as right angle corners), reduce the speed to 50-70% and the cutting depth to 50-80% of the above conditions.
3. We suggest using air blow or MQL (mist).
4. Please adjust the speed, feed and cutting depth according to actual cutting conditions.
5. When WX-CRE enters in Z axis, reduce the feed speed to 30-60% of the above conditions with machining incline angle (β) ≦ 2°.
6. These milling conditions are for a tool extension length: less than 4 x D. For a longer tool extension, reduce the speed, feed rate, and the cutting depth in accordance with the respective coefficients, to prevent chattering.

### 工具突出し量による係数（%） Tool extension coefficients

| 工具突出し量 Overhang Length | 切削速度 Cutting Speed | 軸方向切込み ap | 送り速度 Feed |

切込深さ Depth of Cut

| ap | ae |
|---|---|
| 0.1×コーナ半径(RE) | 0.3D |

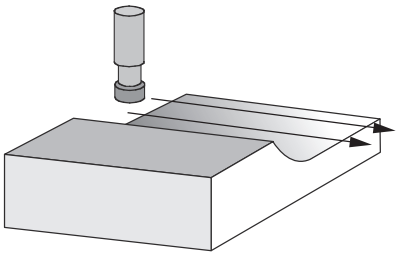
| | ap | ae |
|---|---|---|
| RE≦2 | 0.1×コーナ半径(RE) | 0.3D |
| 2<RE | 0.2mm | 0.3D |

| | ap | ae |
|---|---|---|
| RE≦2 | 0.05×コーナ半径(RE) | 0.3D |
| 2<RE | 0.1mm | 0.3D |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 上表はコーナ部円弧補間の動きを前提とした条件表です。コーナ部円弧補間のない加工(直角曲がりなど)では、上表の回転速度50～70%、切込深さ50～80%として下さい。
3. エアブローまたはMQL(オイルミストクーラント)でご使用下さい。
4. 加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、回転速度、送り速度、切込深さを調整下さい。
5. Z軸の進入は、加工傾斜角度(β)がβ≦2°で、上表の送り速度30～60%に下げてご使用下さい。
6. 上表は、等高線加工、工具の突出し量が4D(外径x4倍以下)の場合の目安です。突出し量が大きな場合は、びびりが発生しやすくなりますので係数を参考に、回転速度、送り速度、切込深さを調整下さい。

1. Use a rigid and precise machine and holder.
2. These milling conditions are based on milling with circular interpolation at corners. For milling without circular interpolation (such as right angle corners), reduce the speed to 50-70% and the cutting depth to 50-80% of the above conditions.
3. We suggest using air blow or MQL (mist).
4. Please adjust the speed, feed and cutting depth according to actual cutting conditions.
5. When WX-CRE enters in Z axis, reduce the feed speed to 30-60% of the above conditions with machining incline angle (β) ≦ 2°.
6. These milling conditions are for a tool extension length: less than 4 x D. For a longer tool extension, reduce the speed, feed rate, and the cutting depth in accordance with the respective coefficients, to prevent chattering.

## 工具突出し量による係数(%) Tool extension coefficients



| 工具突出し量 Overhang Length | 切削速度 Cutting Speed | 軸方向切込み ap | 送り速度 Feed |
|---|---|---|---|
| L／D≦4 | 100 | 100 | 100 |
| L／D=5 | 60～ 80 | 60～ 80 | 70～ 90 |
| L／D=6 | 40～ 60 | 40～ 60 | 60～ 80 |

## 超高速条件用

## Ultra-high speed conditions

●負荷の安定した右図のような平坦部の加工では、高速条件の回転速度、送り速度をさらに150～200%に上げることが可能です。
●工具の突出し量が4D(外径x4倍以下)を基準としたものです。工具の突出し量が4D(外径x4倍)を超える場合は、推奨致しません。

●When milling flat areas with a stable load, the speed and the feed rate of the high-speed conditions can be further increased to 150 - 200%.
●The ultra-high speed conditions are for a tool extension length: less than 4 x D. If the tool extension length is over 4 x D, do not refer to it.

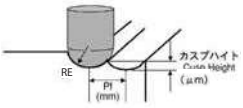
| R5 | 0.1 | 0.3 |
| R6 | 0.1 | 0.35 |



1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. エアブローまたはMQL（オイルミストクーラント）でご使用下さい。
3. この切削条件表は、エンドミルの突出し量が、（外径X４倍以下）を基準としたものです。突出し量が大きな場合は、回転速度、送り速度、切込深さを調整下さい。
4. 上表は、等高線加工（側面加工）の負荷の少ない加工形状での目安です。
加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、異常な切削音、振動、びびりが発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. 傾き角15°（β）を超える加工では、回転速度、送り速度を上表の50～80%に下げてご使用下さい。

1. Use a rigid and precise machine and holder.
2. We suggest using air blow or MQL(mist).
3. These milling conditions are for an mill where the tool extension length is 4 times the diameter of the end mill. When length of the tool extension from the machine is longer, reduce the speed and feed and milling depth.
4. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration, or chattering occurs; depending on the machining shape, cutting amount, rigidity of the machine/ workholding condition, etc, please adjust the speed, feed, and depth of cut.
5. When β is more than 15°, please decrease the speeds and feeds in the above table by 50～80%.

| 切込深さ Depth of Cut | |   | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削剤に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5（R0.25）未満あるいはL／D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 (R0.25) or less, or L / D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

| 切込深さ Depth of Cut | |   | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削剤に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL／D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 (R0.25) or less, or L / D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

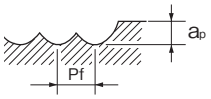
切込深さ Depth of Cut



1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削剤に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25)未満あるいはL／D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

# CUTTING CONDITIONS FOR CARBIDE END MILLS 超硬エンドミル切削条件基準表

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of ϕ0.5 (R0.25) or less, or L / D (aspect ratio) is greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

| 切込深さ Depth of Cut | |   | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤は被削剤に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 上表は等高線加工における負荷の少ない安定した状況を基準としたものです。値は目安ですので実際の加工における切削条件は上表を参考に状況に応じて設定下さい。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5(R0.25) 未満あるいはL／D（アスペクト比）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / oil mist coolant) or air blow is recommended.
3. Use an air blow or a suitable cutting fluid with high smoke retardant properties.
4. The above cutting conditions are for contouring operation with low-load and stable condition. Refer to the table above to set the milling conditions in accordance with the actual situation.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 (R0.25) or less, or L / D (aspect ratio) is greater than 10, high loads can cause tool breakage.
   Therefore, adjust the cutting conditions based on the machining situation.
7. When RPM are insufficient, please reduce the RPM and feed rates at the same ratio as listed above.

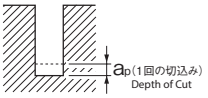
切込深さ Depth of Cut



1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤を使用する場合は、被削材ならびに加工内容に適したものをご使用下さい。
4. 上表は直線加工における負荷の少ない安定した状況を基準としたものです。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいは有効長／外径（L／D）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / mist coolant) or air blow is recommended.
3. When using cutting fluid, choose based on work material and cutting conditions.
4. The cutting conditions shown for straight milling are low-load, safe conditions for reference.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of ϕ0.5 or less, or an L / D (effective length / tool diameter) ratio of greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When the available RPM are insufficient, please reduce the RPM and feed rates in proportion.

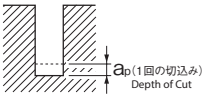
| 切込深さ Depth of Cut | |  ap（1回の切込み） Depth of Cut | | | | | | | | |



1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤を使用する場合は、被削材ならびに加工内容に適したものをご使用下さい。
4. 上表は直線加工における負荷の少ない安定した状況を基準としたものです。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいは有効長／外径（L／D）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / mist coolant) or air blow is recommended.
3. When using cutting fluid, choose based on work material and cutting conditions.
4. The cutting conditions shown for straight milling are low-load, safe conditions for reference.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 or less, or an L / D (effective length / tool diameter) ratio of greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When the available RPM are insufficient, please reduce the RPM and feed rates in proportion.

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤を使用する場合は、被削材ならびに加工内容に適したものをご使用下さい。
4. 上表は直線加工における負荷の少ない安定した状況を基準としたものです。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいは有効長／外径（L／D）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / mist coolant) or air blow is recommended.
3. When using cutting fluid, choose based on work material and cutting conditions.
4. The cutting conditions shown for straight milling are low-load, safe conditions for reference.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 or less, or an L / D (effective length / tool diameter) ratio of greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When the available RPM are insufficient, please reduce the RPM and feed rates in proportion.

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / mist coolant) or air blow is recommended.
3. When using cutting fluid, choose based on work material and cutting conditions.
4. The cutting conditions shown for straight milling are low-load, safe conditions for reference.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 or less, or an L / D (effective length / tool diameter) ratio of greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When the available RPM are insufficient, please reduce the RPM and feed rates in proportion.

| 切込深さ Depth of Cut | |   | | | | | | | | |

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤を使用する場合は、被削材ならびに加工内容に適したものをご使用下さい。
4. 上表は直線加工における負荷の少ない安定した状況を基準としたものです。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいは有効長／外径（L／D）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

| 切込深さ Depth of Cut | |  ap(1回の切込み) Depth of Cut | | | | | | | | |

1. 機械、コレット等は精度の高いものをご使用下さい。
2. 炭素鋼や焼入れ鋼の切削では、MQL（オイルミストクーラント）またはエアブローを推奨いたします。
3. 切削油剤を使用する場合は、被削材ならびに加工内容に適したものをご使用下さい。
4. 上表は直線加工における負荷の少ない安定した状況を基準としたものです。
5. 加工精度、加工形状、加工パスによって条件の調整を行って下さい。
6. φ0.5未満あるいは有効長／外径（L／D）が10以上では、わずかな負荷の増大で折損することがありますので、切削状況を見て切削条件の調整を行って下さい。
7. 回転速度が不足する場合は、回転速度と送り速度を上表に対して同じ比率で下げて下さい。

1. Use a rigid and precise machine and holder.
2. When machining carbon steels or hardened steels, using MQL (Minimum Quantity Lubrication / mist coolant) or air blow is recommended.
3. When using cutting fluid, choose based on work material and cutting conditions.
4. The cutting conditions shown for straight milling are low-load, safe conditions for reference.
5. Please adjust conditions based on machining accuracy, machining shape and machining path.
6. When using a tool with a diameter of $\phi$0.5 or less, or an L / D (effective length / tool diameter) ratio of greater than 10, high loads can cause tool breakage. Therefore, adjust the cutting conditions based on the machining situation.
7. When the available RPM are insufficient, please reduce the RPM and feed rates in proportion.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 乾式の場合には、切りくず詰まりが無いよう、エアブローにて切りくずを除去して下さい。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Please use a suitable fluid with high smoke retardant properties.
4. During Dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.

## NEO-EMS/NEO-CR-EMS
### 高速側面切削 HIGH-SPEED SIDE MILLING

⚠ 加工時に発生する火花や破損による発熱で引火・火災の危険性があります。
防火対策を必ず行って下さい。
高速高精度のマシニングセンタを利用した場合の基準条件表です。

⚠ Caution: Sparks generated during operation or heat caused by tool breakage can cause fire.
Be sure to use all proper fire-prevention measures.
The conditions below are for high speed / high precision machining centers.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に応じてエアブローまたは発煙性の少ない切削油剤をご使用下さい。
4. 乾式の場合には、切りくず詰まりが無いよう、エアブローにて切りくずを除去して下さい。

1. Use a rigid and precise machine and holder.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Please use a suitable fluid with high smoke retardant properties.
4. During Dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.

1. Use a rigid and precise machine and holder.
2. Adjust speeds and feeds according to cutting conditions, cutting depth, and rigidity of the machine.
3. Use a suitable cutting fluid with high smoke retardant properties.
4. When dry milling, use an air blow to avoid chip packing.

切込深さ Depth of Cut

| | ap | ae |
|---|---|---|
| DC＜φ6 | 1.5D | 0.02D |
| φ6≦DC | 1.5D | 0.05D |

Max ae = 0.5mm

| | ap | ae |
|---|---|---|
| DC＜φ6 | 1.0D | 0.01D |
| φ6≦DC | 1.0D | 0.02D |

Max ae = 0.5mm

1. 機械、ホルダは剛性のある、精度の高いものをご使用下さい。
2. エアブローまたはMQL(ミストクーラント)でご使用下さい。ステンレス鋼、チタン合金、超耐熱鋼には発煙の少ないクーラントをご使用下さい。
3. 加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、回転速度、送り速度、切込深さを調整下さい。
4. 上表はエンドミルの突出し長さが工具径の3倍以下の場合の目安です。突出し量が長くなる場合は、びびりが発生しやすくなりますので、回転速度、送り速度、切込深さを調整下さい。

1. Use a rigid and precise machine and holder.
2. We suggest using an air blow or MQL (mist). For milling stainless steels, titanium alloys and heat resistant alloys, use a coolant with high smoke retardant properties.
3. Please adjust the speed, feed and cutting depth according to actual cutting conditions.
4. These milling conditions are for an end mill where the tool overhang length is less than 3×D (mill dia.). When the tool overhang length is longer, please adjust the speed, feed and cutting depth.

| 8<RE | 0.32mm | 0.05D |

1. 高速高精度のマシニングセンタを利用した場合の、軽切込の切削における基準条件表です。
2. 摩耗が進行すると火花が発生しますので、発火性のある切削油剤は絶対に使用しないで下さい。
3. エアブローをご使用下さい。切削油剤を使用される場合は、発煙性の少ないものを選定して下さい。
4. エンドミルの選定の目安として、比較的柔らかい被削材の場合では、通常のFXエンドミルを優先して使用して下さい。
硬い被削材では、FXスーパーエンドミル(FXS-EBDS)を使用して下さい。

1. The indicated speeds and feeds are for high speed light milling with high speed / high precision machining centers.
2. Because tools can cause sparks, do not use flammable fluids.
3. We recommend using an air blow. If using cutting fluids, use a high quality fluid with smoke retardant properties.
4. In general, use FX End Mills for milling less hard materials. For extremely hard materials, use FXS End Mills (FXS-EBDS).

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. エアブローまたはMQL（オイルミスト）でご使用下さい。
3. 機械の回転速度が上がらない場合は、できるだけ最高回転速度で使用し、送り速度を調整して下さい。
4. コーナ部等負荷が大きい加工には、回転速度、送り速度ともに下げて使用下さい。
5. エンドミル取付け時の刃先の振れは、10μm未満に抑えて下さい。

1. Use a rigid and precise machine and holder.
2. We suggest using air blow or MQL(mist).
3. When using low speed machines, use the maximum speed and adjust the feed rate.
4. During heavy load operations such as corner processing, reduce the speed and feed.
5. The run out of the end mill should be within 10μm after chucking.

| 切込深さ Depth of Cut | ap 0.02D / Pf 0.05D | | | | | | | | | | | |

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 摩耗が進行すると火花が発生しますので、発火性のある切削油剤は絶対に使用しないで下さい。
3. エアブローまたはMQL（オイルミストクーラント）でご使用下さい。
4. ステンレス鋼、チタン合金の加工には水溶性クーラントでご使用下さい。
5. 主軸端面からの突出し量が大きなホルダをご使用の場合は、回転速度、送り速度、切込深さを上表より下げ、調整を行って下さい。
6. シュリンクフィット超硬アーバと組み合わせて使用する場合、組み合わせ後の突出し量、剛性に合わせて、上表の回転速度、送り速度を下げてご使用下さい。
7. 切込深さが小さい場合は、回転速度、送り速度をさらに上げることが可能です。

1. Use a rigid and precise machine and holder.
2. Because tools can cause sparks, do not use flammable fluids.
3. We suggest using air blow or MQL(mist).
4. Use a water-soluble coolant for working in stainless steel or titanium alloy.
5. When using a toolholder with an extended gage length; reduce the speed, feed, and depth of cut from the conditions listed above.
6. When using these tools in Shrink fit holders, reduce the speeds and feed rates indicated in the table above in accordance with the projection length & rigidity of the cutting tool / toolholder assembly.
7. If the cutting depth is small, it is possible to further increase the speed and feed.

1. この切削条件表は、エンドミルの突出し量が、(外径×3倍)を基準としたものです。
   突出し量が(外径×5倍)の場合は、上表の切込深さaeを1/3以下にし、回転速度、送り速度ともに60～70%程下げてご使用下さい。
   突出し量が(外径×6倍)の場合は、上表の切込深さaeを1/4以下にし、回転速度、送り速度ともに70～80%程下げてご使用下さい。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に適したもので、発煙性のないものをご使用下さい。
4. 乾式切削の場合には、切りくず詰まりが無いよう、エアブローにて切りくずを除去して下さい。

1. These milling conditions are for an end mill where the tool extension length is 3 times the diameter of the end mill.
   When the length of tool extension is 5 times the end mill diameter, please reduce the above values for speed and feed by 60% to 70% and use 1/3 of the amount of cut.
   When the length of tool extension is 6 times the end mill diameter, please reduce the above values for speed and feed by 70% to 80% and use 1/4 of the amount of cut.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use an air blow to remove disposable chips from the milling area and to eliminate chip packing.

1. この切削条件表は、エンドミルの突出し量が、外径×3倍以下を基準としたものです。
2. 切込深さ、機械剛性等使用状況により、回転速度、送り速度を調整下さい。
3. 切削油剤は被削材に適したもので、発煙性のないものをご使用下さい。
4. 乾式切削の場合には、切りくず詰まりが無いよう、エアブローにて切りくずを除去して下さい。

1. These milling conditions are for an end mill where the tool extension length is 3 times the diameter of the end mill.
2. Please adjust the speed and feed when the cutting depth is large or when machines with low rigidity are used.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use an air blow to remove disposable chips from the milling area and to eliminate chip packing.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. エアブローまたはMQL（オイルミストクーラント）でご使用下さい。
3. この切削条件表は、エンドミルの突出し量が、（外径×4倍以下）を基準としたものです。突出し量が大きな場合は、回転速度、送り速度、切込深さを調整下さい。
4. 上表は、等高線加工（側面加工）の負荷の少ない加工形状での目安です。加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、異常な切削音、振動、びびりが発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. 等高線加工でコーナ部の曲率半径が外径の1.5倍以下の場合は、上表の回転速度50～80%、送り速度50～80%、ピックフィード20～60%程度に下げてご使用下さい。
6. 走査線加工でご使用の場合、加工傾斜角度（$\beta$）が$15^\circ \leqq \beta$の場合は、上表の回転速度40～60%、送り速度30～50%、軸方向切込深さ30～80%程度に下げてご使用下さい。
7. 切込深さが小さい場合は、回転速度、送り速度をさらに上げることが可能です。

1. Use a rigid and precise machine and holder.
2. We suggest using air bolow or MQL (mist).
3. These milling conditions are for an end mill where the tool extension length is 4 times the diameter of the end mill. When length of the tool extention from the machine is long, reduce the speed and feed and milling depth.
4. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
5. When the radius of curvature is less than 1.5 times the tool diameter, please reduce the speed to 50 － 80%, the feed rate to 50 － 80%, and the pick feed to 20 － 60% of the above shown cutting conditions.
6. When the machining incline angle ($\beta$) is more than $15^\circ$, please reduce the speed to 40 － 60%, the feed 30 － 50%, and the axial cutting depth to 30 － 60% of the above shown cutting conditions.
7. If the cutting depth is small, it is possible to further increase the speed and feed.

1. 機械、ホルダは剛性のある精度の高いものをご使用下さい。
2. 切削油剤は被削材に適したもので、発煙性の少ないものを選定して下さい。
3. この切削条件表は、エンドミルの突出し量が、(外径×4倍以下)を基準としたものです。突出し量が大きな場合は、回転速度、送り速度、切込深さを調整下さい。
4. 上表は、等高線加工(側面加工)の負荷の少ない加工形状での目安です。加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、異常な切削音、振動、びびりが発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. 等高線加工でコーナ部の曲率半径が外径の1.5倍以下の場合は、上表の回転速度50～80%、送り速度50～80%、ピックフィード20～60%程度に下げてご使用下さい。
6. 走査線加工でご使用の場合、加工傾斜角度(β)が15°≦βの場合は、上表の回転速度40～60%、送り速度30～50%、軸方向切込深さ30～80%程度に下げてご使用下さい。
7. 切込深さが小さい場合は、回転速度、送り速度をさらに上げることが可能です。

●エンドミルの選定の目安として、
・さらに仕上面の向上をご希望の場合、一般材においてはFX(WX)エンドミルシリーズ(FX-MG-EBD、FX-EBD-6、WX-EBD)をご使用下さい。また、高硬度材においては、FXSエンドミルシリーズ(FXS-EBDS)をご使用下さい。

1. Use a rigid and precise machine and holder.
2. Use a suitable cutting fluid with high smoke retardant properties.
3. These milling conditions are for an end mill where the tool extension length is 4 times the diameter of the end mill. When length of the tool extention from the machine is long, reduce the speed and feed and milling depth.
4. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
5. When the radius of curvature is less than 1.5 times the tool diameter, please reduce the speed to 50 － 80%, the feed rate to 50 － 80%, and the pick feed to 20 － 60% of the above shown cutting conditions.
6. When the machining incline angle (β) is more than 15°, please reduce the speed to 40 － 60%, the feed 30 － 50%, and the axial cutting depth to 30 － 60% of the above shown cutting conditions.
7. If the cutting depth is small, it is possible to further increase the speed and feed.

● As a guideline in selecting end mills,
・If the better surface finish is required, please use the FX or WX End Mill series for general materials (i.e. FX-MG-EBD, FX-EBD-6, or WX-EBD), and the FXS end mill series for high hardened materials (FXS-EBDS).

2. エアブローまたはMQL（オイルミストクーラント）でご使用下さい。
3. この切削条件表は、エンドミルの突出し量が、（外径×4倍以下）を基準としたものです。突出し量が大きな場合は、回転速度、送り速度、切込深さを調整下さい。
4. 上表は、等高線加工（側面加工）の負荷の少ない加工形状での目安です。加工形状、切込深さ、機械剛性、ワーク保持等の使用状況により、異常な切削音、振動、びびりが発生する場合、回転速度、送り速度、切込深さを調整下さい。
5. 等高線加工でコーナ部の曲率半径が外径の1.5倍以下の場合は、上表の回転速度50～80%、送り速度50～80%、ピックフィード20～60%程度に下げてご使用下さい。
6. 切込深さが小さい場合は、回転速度、送り速度をさらに上げることが可能です。

1. Use a rigid and precise machine and holder.
2. We suggest using air bolow or MQL (mist).
3. These milling conditions are for an end mill where the tool extension length is 4 times the diameter of the end mill. When length of the tool extention from the machine is long, reduce the speed and feed and milling depth.
4. The above condition shows an approximate standard for contouring operation (side milling) with a low machining load. If abnormal cutting sounds, vibration or chattering occur depending on the machining shape, cutting amount, rigidity of the machine or work holding condition, etc., please adjust the speed, feed and the depth of cut.
5. When the radius of curvature is less than 1.5 times the tool diameter, please reduce the speed to 50 － 80%, the feed rate to 50 － 80%, and the pick feed to 20 － 60% of the above shown cutting conditions.
6. If the cutting depth is small, it is possible to further increase the speed and feed.

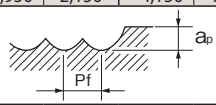
# 超硬エンドミル切削条件基準表 CUTTING CONDITIONS FOR CARBIDE END MILLS

## FXS-EBT



### 高速切削用

⚠ 加工時に発生する火花や破損による発熱で引火・火災の危険があります。
防火対策を必ずおこなって下さい。
高速高精度のマシニングセンタを利用した場合の基準条件表です。

### HIGH-SPEED LIGHT MILLING

Caution: Sparks generated during operation or heat caused by tool breakage can cause fire. Be sure to use all proper fire-prevention measures.
The conditions below are for high speed / high precision machining centers.

### 高速仕上げ加工 ●加工パスは等高線加工を前提としています。 ●The machining path is on condition of contouring line operation. HIGH-SPEED FINISHING
