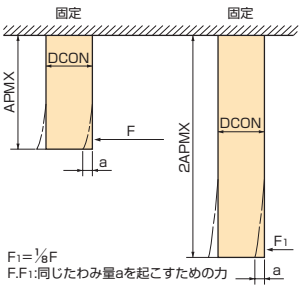
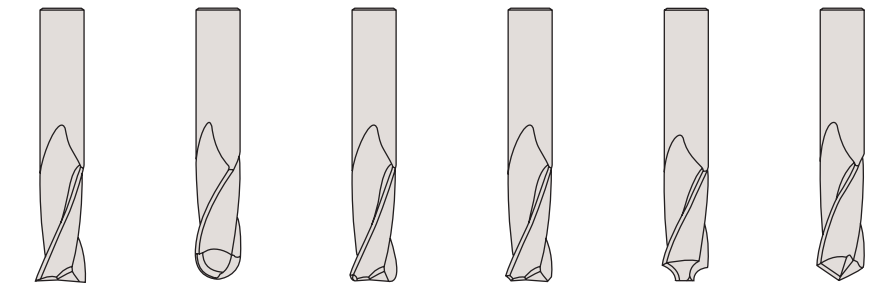
# 超硬エンドミルをお選びになる前に

## ■各部の名称



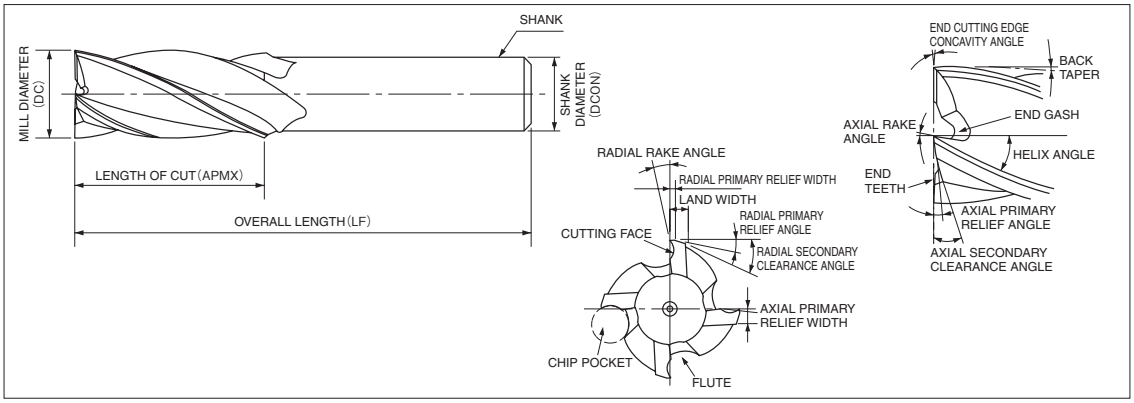
## ■刃数(ZEFP)

エンドミルの性能を左右する大きな要因のひとつに、刃数があります。一般に、刃数の少ないものはチップポケットが大きく、切りくずの排出はよいのですが、その反面、工具断面積は小さく、剛性は低下しますので、切削中にたわみを生じやすくなります。逆に、刃数が多くなると工具断面積は大きくなり剛性は大きくなりますが、チップポケットは小さくなり切りくず収容能力は低下し、切りくずづまりの状態を生じやすくなります。



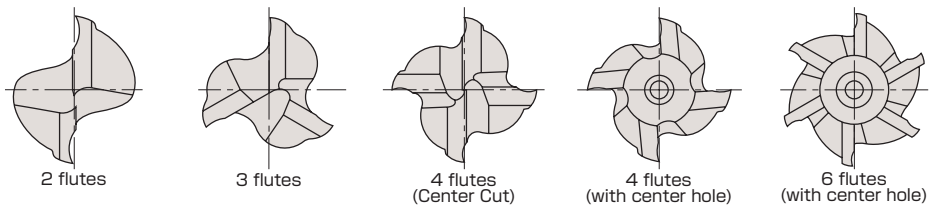
## ■刃長(APMX)

刃長は短いほど工具剛性が増し、切削性能もよくなります。エンドミルの剛性は刃長（突出し長さ）の3乗に反比例します。したがって、刃長（突出し長さ）が2倍になると工具剛性は1/8になります。エンドミルは横送りによって使用する工具ですから、このことは大変重要となります。必要以上に長い刃長のエンドミルを使用することは大きなデメリットとなります。OSGでは刃長のバリエーションも豊富に取り揃えておりますので、加工の内容に見合った最適な刃長をお選び下さい。

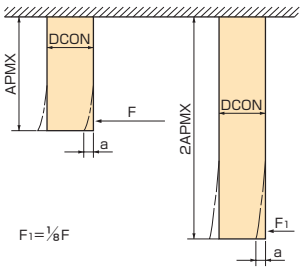


## ■底刃の形状

エンドミル底刃形状には、代表的なものにスクエアエンド、ボールエンド、ラジアスエンドがあり、OSGでは各種在庫を取り揃えております。この他にもコーナ面取り、コーナラウンディング、ドリルノーズなど、用途に合わせて対応しております。

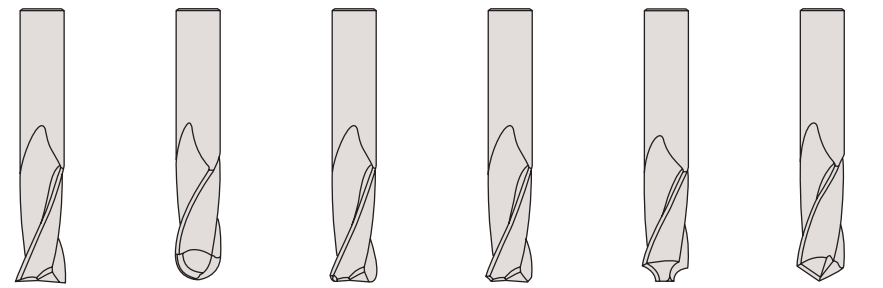


## ■TERMINOLOGY



## ■NUMBER OF FLUTES(ZEFP)

The number of flutes should be determined by the work material, dimensions of the work piece and milling conditions. In general, an end mill with a small number of flutes and large chip room is used for roughing, and an end mill with a large number of flutes is used for finishing.



## ■LENGTH OF CUT(APMX)

The shorter the end mill, the smaller the deflection and the stronger the rigidity. Because rigidity varies in proportion to length of cut by a factor to the power of 3 (for example, when the length of cut doubles, the rigidity decreases to 1/8), it is necessary to keep the length of cut as short as possible.

## ■END PROFILE

Stocked end profiles are typically square end, ball end and radius end. Corner radius, corner chamfer, corner rounding and drill nose end profiles can be supplied via special order.

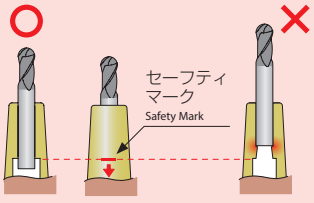
## 使用上の注意 Operating Precautions

### 最大挿入長 Maximum Insertion Depth

刃物挿入時、刃物端が底当り状態になると精度不良の原因となります。必ず最大挿入長さを守って下さい。



If the cutting tool is inserted until its end bottoms out, it can result in poor precision. Make sure to adhere to the maximum insertion depth.

### セーフティマーク Safety Mark

刃物挿入時、挿入長さが短いとホルダ破損の原因となります。必ずセーフティマークより深く刃物を挿入して下さい。

If the insertion depth of the cutting tool is too short, it can damage the holder. Make sure the cutting tool is inserted deeper than the safety mark.
